

JIS UNIVERSITY

**Course Structure & Syllabus
for B.Sc. MICROBIOLOGY (R-
26)**

**As per National Education Policy 2020
w.e.f. 2026-2027**

Department of Biosciences

B.Sc. Microbiology

Revised Curriculum Structure to be effective from

2026-2027

Credit Distribution across the Course for 4 years B.Sc. Honors with Research				
Course Type	Total Papers	Credit		Total Credit
		Theory	Practical	
Major	16	64	20	84
Minor	8	26	12	38
Multidisciplinary/ Interdisciplinary Courses (IDC)	3	12	-	12
Ability Enhancement Courses (AEC)	4	8		8
Skill Enhancement Courses (SEC)	3	9		9
Value Added Courses (VAC)	2	6		6
Summer Internship		4		4
Research Project / Dissertation		12		12
TOTAL				173

Credit Distribution across the Course for 3 years B.Sc. Degree

TOTAL				135

Major Courses (16 Papers for the Students of Microbiology)		Semester	Subject Code
MAJOR I	BIOCHEMISTRY	I	YMI1001
MAJOR II	METABOLISM	II	YMI 2001
MAJOR III	MICROBIOLOGY	III	YMI 3001
MAJOR IV	CELL BIOLOGY	IV	YMI 4001
MAJOR V	MOLECULAR BIOLOGY		YMI 4002
MAJOR VI	MICROBIAL GENETICS	V	YMI 5001
MAJOR VII	RECOMBINANT DNA TECHNOLOGY		YMI 5002
MAJOR VIII	VIROLOGY	VI	YMI 6001
MAJOR IX	IMMUNOLOGY		YMI 6002
MAJOR X	MEDICAL MICROBIOLOGY		YMI 6003
MAJOR XI	BIOINFORMATICS		YMI 6004
MAJOR XII	ENVIRONMENTAL MICROBIOLOGY	VII	YMI 7001
MAJOR XIII	FOOD AND DAIRY MICROBIOLOGY		YMI 7002
MAJOR XIV	BIOPROCESS TECHNOLOGY AND IKS		YMI 7003
MAJOR XV	HOST-PATHOGEN INTERACTION	VIII	YMI 8001
MAJOR XVI	MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT		YMI 8002
MAJOR XVII	PROTEIN SEPARATION TECHNOLOGY		YMI 8003

Minor Courses (3 Papers for the Students of Microbiology)		Semester	Subject Code
MINOR I	ORGANIC CHEMISTRY I	I	YMI1002
MINOR II	IKS Foundation course	II	YMI1003
MINOR III	ORGANIC CHEMISTRY II	II	YMI2002
MINOR IV	PHYSICAL CHEMISTRY	III	YMI3002
MINOR V	INORGANIC CHEMISTRY	IV	YMI4003
MINOR VI	Traditional Knowledge of Indian Foods(IKS)	V	YMI5004
MINOR VII	BIOPHYSICAL CHEMISTRY	VI	YMI5003
MINOR VIII	Ethnomedicine and IKS	VII	YBT8004

Multidisciplinary/ Interdisciplinary Courses (IDC) (5 Papers for the Students of Microbiology)		Semester	Subject Code
IDC I	Computer Fundamentals	I	YCA1003

IDC II	Fundamentals of Physics	II	YPH2001
IDC III	Biomathematics and Biostatistics	III	YMT3005

Ability Enhancement Courses (AEC) (4 Papers for the Students of Microbiology)		Semester	Subject Code
AEC I	Communicative English and Indian Knowledge System	I	XED1001
AEC II	ENGLISH ADVANCE	II	YED2001
AEC III	ENTREPRENEURSHIP DEVELOPMENT	III	YMI3006
AEC IV	VALUES AND ETHICS	IV	YMI4004

Skill Enhancement Courses (SEC) (10 Papers for the Students of Microbiology. Any one paper should be taken by student)		Semester	Subject Code
SEC I	INTELLECTUAL PROPERTY RIGHTS	I	YMI1004
SEC II	ENZYMOLGY		YMI1005
SEC III	MOLECULAR DIAGNOSTICS		YMI1006
SEC IV	BIOFERTILIZERS AND BIOPESTICIDES		YMI1007
SEC V	STRUCTURAL BIOINFORMATICS	II	YMI2003
SEC VI	FERMENTATION TECHNOLOGY		YMI2004
SEC VII	BASICS OF FORENSIC SCIENCE		YMI2005
SEC VIII	ANIMAL BIOTECHNOLOGY		YMI2006
SEC IX	MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES	III	YMI3004
SEC X	MANAGEMENT OF HUMAN MICROBIAL DISEASES		YMI3005

Value Added Courses (VAC) (4 Papers for the Students of Microbiology; Any one should be taken by students)		Semester	Subject Code
VAC I	CONSTITUTIONAL LAW	I	YMI1008
VAC II	PUBLIC HEALTH AWARENESS		YMI1009
VAC III	ENVIRONMENTAL SCIENCE		YMI2007

VAC IV	MUSHROOM CULTURE	II	YMI2008

Course Title	BIOCHEMISTRY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of biochemistry and metabolism.

Course Outcome:

CO1: Inculcate an understanding of the function of biological molecules through the study of their molecular structure, and interaction with other biomolecules.

CO2: Develop a documented understanding of the chemical and regulatory interrelationship between major cellular synthetic and catabolic pathways by participating in class discussions, and completing quizzes and exams.

CO3: Demonstrate an awareness of the impact of biochemistry on the environment, society, and other cultures outside the scientific community.

CO4: Inquisitiveness to find application of biochemistry in medical and biological field settings.

Course Content:

Module 1: Biomolecules

[12L]

Aqueous solutions: Properties of water, acid bases and buffer; **Amino Acids:** general properties and structure, acid base properties, zwitterion, titration curve of amino acid, optical activity peptide bond, Ninhydrin reaction, natural modifications of amino acids, non-protein amino acids; **Carbohydrate:** aldoses, ketoses, trioses, tetroses, pentoses, hexoses, stereo isomerism, epimers, anomers, mutarotation, furanose and pyranose forms, Haworth projection formula, chair and boat conformation of glucose, sugar derivatives, amino sugars, disaccharides, polysaccharide, basic concept and structure of peptidoglycan; **Lipids:** classification, fatty acids structure and functions, acyl-glycerol, phosphatidylethanolamine, phosphatidylcholine, sphingolipids, cerebroside, gangliosides, properties of lipid aggregates, introduction of lipid micelles, monolayers, bilayers, biological membrane, FRAP. **Nucleic Acid:** Nucleotides and Nucleic acids, double helical structure of DNA, concept of Hydrogen bond, DNA melting curve, denaturation and renaturation. Vitamins: Basic concept, classification, vitamins as coenzyme precursors and human deficiency-related diseases.

Module 2: Proteins and peptides:**[12L]**

Peptide bond, Ramachandran plot, disulfide bond, primary, secondary, tertiary and quaternary structure of proteins, physicochemical properties of protein, absorbance, emission isoelectric point, three-dimensional structure of protein: folds, motifs, structure and function relation, globular proteins, fibrous proteins, protein stability, Electrostatic forces, van der Waals forces, dipole-dipole interaction, London dispersion force, hydrogen bond, hydrophobic forces, basic concept of protein folding, structure and mechanism of hemoglobin. Oligopeptides: Structure and functions of naturally occurring glutathione and insulin and synthetic aspartame.

Module 3: Enzymes:**[14L]**

Introduction to enzymes, active site, substrate specificity, Lock and key hypothesis, induced fit hypothesis, enzyme classification, mechanism of action of enzymes, transition state, activation energy, apoenzyme, holoenzyme, cofactors, prosthetic group, Enzyme kinetics, rapid equilibrium approach (Michaelis-Menten equation), steady-state approach (Briggs and Haldane), significance of K_m , double reciprocal plots, reaction order, competitive inhibition, non-competitive inhibition, uncompetitive inhibition, allosteric mechanism, definitions of enzyme unit, specific activity, turnover number, catalytic efficiency; multienzyme complex: pyruvate dehydrogenase; isozyme: lactate dehydrogenase; effect of pH and temperature on enzyme activity.

Module 4: Bioenergetics:**[10L]**

Laws of Thermodynamics, concept of enthalpy & entropy, Gibbs Free Energy, standard free energy change and equilibrium constant, coupled reactions and additive nature of standard free energy change, concept of energy rich compounds, calculation of standard free energy change and free energy change for a particular biochemical reaction, free energy change for membrane transport, oxidative phosphorylation and chemiosmotic hypothesis.

Total Contact Hours	36			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of biochemistry and metabolism.

Course Outcome:

C01: Ability to draw on classroom knowledge and laboratory classes to make an individual contribution in a research laboratory.

C02: Ability to draw on classroom knowledge and laboratory classes to make an individual contribution in a research laboratory

C03: Correlate the theoretical basis of the tools, technologies and methods common to Biochemistry.

Suggestive List of Experiments:

1. Preparation of Buffer and pH measurement [2 days]
2. Qualitative/Quantitative tests for carbohydrates, reducing sugars [2 days]
3. Qualitative/Quantitative estimation of proteins [2 days]
4. Qualitative/Quantitative estimation of lipids [2 days]
5. Qualitative/Quantitative estimation of DNA [2 days]
6. Study of protein, DNA, RNA structures using (Pymol/Chimera) [2 days]

Course Code	YMI1002			
Course Title	ORGANIC CHEMISTRY I			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 chemistry knowledge			

Learning Objective:

The concepts developed in this course will aid in quantification of several concepts in chemistry that have been introduced at the 10+2 levels in schools. Technology is being increasingly based on the electronic, atomic and molecular level modifications.

Course Outcomes:

Students will gain an understanding of:

CO 1: the hybridization and geometry of atoms and the three-dimensional structure of organic molecules

CO 2: the reactivity and stability of an organic molecule based on structure, including conformation and stereochemistry

CO 3: an understanding of nucleophiles, electrophiles, electronegativity, and resonance

CO 4: how to use their understanding of organic mechanisms to predict the outcome of reactions

Course Content:

Module I: Fundamental of Organic Chemistry (8L)

Classification, and nomenclature, hybridization, shapes of molecules, influence of hybridization on bond properties. Localized and delocalized bonds, inductive effect, field effect, electromeric effect, conjugation, resonance, hyper conjugation, steric assistance and steric inhibition of resonance, tautomerism. Dipole moment; Organic acids and bases; their relative strength. Formation, structure, stability and reactions of classical and non-classical carbocations, carbanions, carbenes, benzyne. Classification of reactions: substitution, elimination, addition, rearrangement.

Module II: Stereochemistry (10L)

Concept of constitution, stereochemical representation: Fischer, Newman, Sawhorse, Flying-wedge and their interconversions, molecular symmetry: plane, centre, simple

and alternating axes; symmetry operations, stereogenicity, Optical Activity, Specific Rotation, chirotopicity, achirotopicity; Axial chirality. Enantiomerism & Diastereoisomerism, Stereogenic centers involving C=C, C=N; D/L, R/S, E/Z, syn/ anti, cis/trans, meso/dl,threo/erythro nomenclature with CIP rules. Types of cycloalkanes and their relative stability, Baeyer strain theory, Conformation analysis of alkanes: Relative stability: Energy diagrams of cyclohexane: Chair, Boat and Twist boat forms; Relative stability with energy diagrams.

Module III: Chemistry of Aliphatic Hydrocarbons (16L)

Chemistry of alkanes: Formation of alkanes, Wurtz Reaction, Wurtz-Fittig Reactions, Free radical substitutions: Halogenation -relative reactivity and selectivity. Formation of alkenes and alkynes by elimination reactions, Mechanism of E1, E2, E1cbreactions.Saytzeff and Hofmann eliminations.

Reactions of alkenes: Electrophilic additions their mechanisms (Markownikoff/ Anti Markownikoff addition), mechanism of oxymercuration - demercuration, hydroboration oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti-hydroxylation(oxidation). 1,2-and 1,4-addition reactions in conjugated dienes and, Diels-Alder reaction; Allylic and benzylic bromination and mechanism, e.g. propene, 1- butene, toluene, ethylbenzene.

Reactions of alkynes: Acidity, Electrophilic and Nucleophilic additions. Hydration to formcarbonyl compounds, Alkylation of terminal alkynes.

nucleophilic substitution reactions – SN1, SN2 and SNi mechanisms with stereochemical aspects and effect of solvent etc.; nucleophilic substitution vs. elimination.

Module IV: Aromaticity and Aromatic Hydrocarbons (14L)

Aromaticity: Hückel's rule, aromatic character of arenes, cyclic carbocations/carbanions andheterocyclic compounds with suitable examples. Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft's alkylation/acylation with theirmechanism. Directing effects of the groups. Preparation from diazonium salts. nucleophilic aromatic substitution; SNAr, Benzyne mechanism. Relative reactivity of alkyl, allyl/benzyl, vinyl and aryl halides towards nucleophilic substitution reactions.

Course Title	ORGANIC CHEMISTRY I LABORATORY			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	0	0	3	3
Total Contact Hours	36			
Pre-requisites	10+2 chemistry knowledge			

Learning Objective:

Students will gain practical knowledge on various avenues of organic chemistry.

Course Outcomes:

Students will gain an understanding of:

CO 1: how to calculate a limiting reagent, yield, and percent

yield CO 2: how to maintain a detailed scientific notebook

CO 3: how to critically evaluate data collected to determine the identity, purity, and yield of products

CO 4: how to summarize findings in writing in a clear and concise manner

CO 5: how to use the scientific method to create, test, and evaluate a hypothesis

Suggested list of experiments:

1. Checking the calibration of the thermometer
2. Purification of organic compounds by crystallization using the following solvents:
a. Water, b. Alcohol, c. Alcohol-Water
3. Determination of the melting points of above compounds and unknown organic compounds
4. Effect of impurities on the melting point – mixed melting point of two unknown organic compounds
5. Determination of boiling point of liquid compounds. (boiling point lower than and more than 100 °C by distillation and capillary method)
6. Chromatography
 - a. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography
 - b. Separation of a mixture of two sugars by ascending paper chromatography
 - c. Separation of a mixture of o-and p-nitrophenol or o-and p-aminophenol by thin layer chromatography (TLC)
7. Detection of special elements (N, S, Cl) from Organic Compounds.

Any other experiment carried out in the class.

Course Title	COMPUTER FUNDAMENTALS			
Category	INTERDISCIPLINARY COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic idea of Computer			

Learning objectives:

To understand characteristics of computers, basic computer organization.

To know number system, binary arithmetic, Boolean Algebra & Logic Circuit.

Idea about storages and input output devices, computer software, computer languages, Algorithm, Flowcharts.

To write different application like MS Paint, Office.

To understand about Operating System, Data Communication & Networks and Internet.

Course Outcome:

CO1: Understanding characteristics of computers, basic computer organization.

CO2: Knowledge of number system, binary arithmetic, Boolean Algebra & Logic Circuit.

CO3: Idea about storages and input output devices, computer hardware, software, computer languages, Algorithm, Flowcharts.

CO4: Write different application like MS Paint, MS Office (MS Word, MS Excel, MS PowerPoint and MS Access).

CO5: Understanding about Operating System, Data Communication & Networks and Internet.

Course Content:

Module 1: Introduction of computer and Basic computer organization (3L)

Introduction of computer: Characteristics of Computer, Evolution of Computer, Generations of Computer (I, II, III, IV, V), Classifications of Computer (2L)

Basic computer organization: Input Unit, Output Unit, Storage Unit, Arithmetic & Logic Unit, Control Unit, Central Processing Unit, The system concepts (1L)

Module 2: Number System, Binary Arithmetic, Codes & Logic Gates (9L)

Number System: Digit Concept, Bit, Byte, Nibble, Word, Weights, Base and Fractions, Decimal Number System, Binary Number System, Octal Number System, Hexadecimal Number System (1L)

Conversion (Number & Fraction): Decimal to Binary, Decimal to Octal, Decimal to Hexadecimal, Binary to Decimal, Binary to Octal, Binary to Hexadecimal, Octal to Decimal, Octal to Binary, Octal to Hexadecimal, Hexadecimal to Decimal, Hexadecimal to Binary, Hexadecimal to Octal (4L)

Binary Arithmetic: Binary Addition, Binary Subtraction, Binary Multiplication, Binary Division, Concepts of 1's complement and 2's complement, Binary Subtraction using 1's complement and 2's complement (2L)

Computer Codes: Weighted code (BCD, EBCDIC, ASCII, 8421, 2421, 84-2-1, Excess-3), Non-weighted code (Gray Code), Conversion from Binary to Gray code, Conversion from Decimal to BCD, Conversion BCD to Decimal (1L)

Logic Gate: Rules, symbol, truth table and circuit diagrams of NOT, OR, AND, NOR, NAND, XOR, EX-NOR, BUFFER and Negative-OR, Universal Gate, NOT, OR & AND using Universal Gates (1L)

Module 3: Storage and Input/output Devices, Computer Hardware & Software, Computer Language, Program Planning and Language Processor (8L)

Primary Storage: RAM (SRAM, DRAM), ROM (MROM, PROM, EPROM, EEPROM), Cache Memory, Register, Motherboard and Memory unit (1L)

Secondary Storage: Sequential & Direct Access devices, Punched Paper Tape, Magnetic Tape, Tape Cassettes & Cartridges, Magnetic Disk, Floppy Disk, Winchester Disk, Magnetic Drum, Magnetic Bubble Memory, Optical Disk, Flush Drives (2L)

Input Devices: Keyboard, Mouse, Joy Stick, Light pen, Track Ball, Scanner, Graphic Tablet, Microphone, Magnetic Ink Card Reader (MICR), Optical Character Reader (OCR), Bar Code Reader (BCR), Optical Mark Reader (OMR) (1L)

Output Devices: Monitor (Cathode-Ray Tube (CRT), Flat Panel Display (LCD, LED, Plasma, 3D)), Printer (Impact (Character (Dot-matrix, Daisy Wheel), Line (Drum, Chain)), Non-impact (Laser, Inkjet)), Plotter (Drum, Flatbed) (1L)

Computer Hardware & Software: Port, Hardware, Relation between hardware and software, Software (System Software and Application Software) (1L)

Programming Planning: Purpose, Algorithm, Flowcharts, Decision Tables, Pseudo code (1L)

Computer Language & Language Processor: Low level (Machine level, Assembly level), High level (Procedure-oriented, Object-oriented), Assembler, Compiler & Interpreter (1L)

Module 4: Introduction to Microsoft Paint & Microsoft Office (16L)

Microsoft Paint: Opening, Drawing & Erasing, Creating a shape, adding text, Opening, cropping, rotating, resizing image, save project (1L)

Microsoft Word: Introduction, Entering text, Editing Document, Formatting Text, Formatting Page, Working with Tables, Mail Merge & Macro (6L)

Microsoft Excel: Introduction, Editing Worksheet, Formatting Cells, Formatting Worksheets, Formulae, Pivot Table (5L)

Microsoft PowerPoint: Introduction, Editing Presentation, Formatting Presentation, Working with multimedia (2L)

Microsoft Access: Overview, Object, Data Type, Create Database, Create Table, Adding Data, Query Data, Action Query (2L)

Module 5: Basic concepts of Operation System, Data Processing, Database System, Data Communication & Network, Internet and Computer Virus (12L)

Operating System: Definition, Function, Evolution, Single User OS, Multiuser OS, Batch Processing, Spooling, Multiprogramming, Multiprocessing, Time sharing, On-line processing, Real time processing, Disk Operating System (DOS), Windows 98/XP and later versions, Windows server NT/2000, Unix/Linux & servers (3L)

Data Processing: Definition, Data Storage Hierarchy, File Organization (Sequential, Direct, Indexed, Index-sequential), File Utilities (Sorting, Searching, Merging, Copying, Printing, Maintenance) (1L)

Database System: Concepts, DBMS, Shortcomings of File Management Systems, Database Structure (List, Hierarchical or Tree, Network, Relational), Advantage & Disadvantages of Database (1L)

Data Communication & Network: Basic Elements, Data Transmission Modes (Simplex, Half Duplex, Full Duplex), Data Transmission Speed (Narrowband, Voice band, Broadband), Transmission Media (Twisted Pair, Coaxial Cable, Microwave system, Communications Satellite, Optical Fibbers), Digital and Analog Transmission (Amplitude Modulation, Frequency Modulation, Phase Modulation), Switching Techniques (Circuit, Message, Packet), Network Topologies (Star, Ring, Mesh, Hybrid), PAN, LAN, MAN, WAN, World Wide Web (WWW), Network Security, Firewall (5L)

Internet: Definition, Search engines, E-mail, Chat (1L) Computer

Virus: Overview, Symptoms, Effect, Precautions (1L)

Course Code	YBT1003			
Course Title	IKS foundation course			
Category	ELECTIVE COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	None			

Learning Objectives:

Through this course, students will explore the epistemological foundations of IKS, emphasizing holistic approaches, sustainability, and interconnectedness between humans, society, and nature. The curriculum blends classical texts, oral traditions, and indigenous practices with contemporary research, encouraging critical reflection and comparative understanding with modern scientific paradigms.

C01. Understand the foundations and evolution of Indian Knowledge Systems.

C02. Understand multidisciplinary contributions of IKS in mathematics, astronomy, medicine, ecology, and governance areas.

C03. Compare and evaluate the relevance of traditional knowledge in addressing contemporary. Issues related to sustainability, health, and social well-being.

C04. Create projects or research approach that extend IKS knowledge into modern contexts.

Module 1

Introduction to IKS

[6]

Definition and characteristics of Indian Knowledge Systems. Historical journey from ancient times to the 18th century CE. Impact of colonial education policies and the need for revisiting traditional knowledge. Role of Traditional educational institutions: Gurukuls, Pathshalas, Takshashila, and Nalanda. Local heritage sites and their relevance.

Module 2

IKS in Ancient Indian Mathematics, Astronomy, Arts and Culture

[6]

Ancient numeral systems and mathematical concepts. Indian logic systems and epistemology. Overview of Indian astronomy; celestial coordinate systems and calendar systems. Study and Understanding of traditional Indian art forms, including sculpture, dance, and music. Promotion of cultural heritage through education and practice: Temple architecture overview. Cave and monolithic architecture. Architectural styles: Chalukya, Pallava, Chola, Hoysala, Mauryan, Vijayanagara. Buddhist and Jain art & architectural heritage.

Module 3

[6]

Introduction to Ancient Environmental Sustainability

Traditional knowledge systems related to agriculture, water management, and ecological balance. Application of sustainable practices derived from ancient texts and practices. Integration of IKS in contemporary environmental conservation efforts.

Module 4

[6]

IKS in Health and Medicine

In-depth study of Ayurveda, its diagnostic methods, and therapeutic practices. Understanding the holistic approach to health encompassing physical, mental, and spiritual well-being. Application of Ayurveda principles in contemporary healthcare systems. Ayurvedic perspectives on health, including dietary regimes, disease management, elements of wellness—and their intersections with botany and medical science

Course Code	YED1002			
Course Title	Communicative English and Indian Knowledge System			
Category	ABILITY ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	None			

Learning Objectives:

The aim of the course is to enable the learners to communicate effectively and appropriately in real life situation and make them aware of our traditional concepts in Indian Knowledge System (IKS).

Course Outcomes

C01: Develop effective communication skills.

C02: Apply English grammar and writing skills.

C03: Develop academic reading and comprehension.

C04: Understand key concepts of the Indian Knowledge System (IKS).

Module 1: Communication (4L)

Nature and process of communication; verbal and non-verbal communication; formal and informal communication; barriers; body language; intercultural and gender-sensitive communication; listening and speaking skills.

Module 2: Grammar and Writing Skills (8L)

Parts of speech; articles; prepositions; tenses; subject-verb agreement; paragraph writing; formal and informal letters; e-mail writing.

Module 3: Reading Skills (6L)

Reading comprehension; skimming and scanning; identifying main ideas; inference; vocabulary in context; summarising; note-making.

Module 4: Indian Knowledge System (6L)

Introduction to Indian Knowledge System; the Vedas and Upanishads; the Ramayana and the Mahabharata as sources of ethical and cultural values; position of women in ancient Indian society; Gurukul system of education; Indian philosophy and the concept of Dharma; relevance of IKS in contemporary society.

Course Title	INTELLECTUAL PROPERTY RIGHTS			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

To introduce fundamental aspects of Intellectual Property Rights to students who are going to play a major role in development and management of innovative projects in industries.

To disseminate knowledge on patents, patent regime in India and abroad and registration aspects.

To disseminate knowledge on copyrights and its related rights and registration aspects.

To disseminate knowledge on trademarks and registration aspects.

To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects.

Course outcome:

CO 1: The students once they complete their academic projects, shall get an adequate knowledge on patent and copyright for their innovative research works

CO 2: During their research career, information in patent documents provide useful insight on novelty of their idea from state-of-the art search. This provide further way for developing their idea or innovations

CO 3: Pave the way for the students to catch up Intellectual Property(IP) as career option-

R&D IP Counsel

Government Jobs – Patent

Examiner Private Jobs

Patent agent and Trademarkagent

Entrepreneur

Course Content:

Module 1: Overview of Intellectual Property

[8L]

Definition of Intellectual Property Right (IPR)

Need for Intellectual Property Rights

Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design

Sui Generis System

Geographical Indication, Plant Varieties and Layout Design

Genetic Resources and Traditional Knowledge

Trade Secret

Need for Intellectual Property Rights

Impact of IPR on Development, Health, Agriculture and Genetic Resources

IPR in India: Genesis and development

IPR in abroad - Major International Instruments concerning Intellectual Property Rights:

Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention,

1952, the WIPO Convention, 1967, the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994

Module 2: Patents

[6L]

Patents

Elements of Patentability: Novelty, Non Obviousness (Inventive Steps), Industrial Application

Non - Patentable Subject Matter

Registration Procedure

Rights and Duties of Patentee

Assignment and Licence

Restoration of lapsed Patents

Surrender and Revocation of Patents

Infringement, Remedies & Penalties

Module 3: Copyrights

[4L]

Nature of Copyright

Subject matter of Copyright: Original Literary, Dramatic, Musical, Artistic Works;

Cinematograph Films and Sound Recordings

Registration Procedure

Term of Protection

Ownership of Copyright

Concept of Plagiarism

Assignment and Licence of Copyright

Infringement, Remedies & Penalties

Module 4: Trademarks

[4L]

Concept of Trademarks

Different kinds of Marks (Brand Names, Logos, Signatures, Symbols, Well Known Marks, Certification Marks and Service Marks)

Non Registrable

Trademarks Registration of

Trademarks

Rights of Holder and Assignment and Licensing of Marks

Infringement, Remedies & Penalties

Module 5: Other forms of IP

[10L]

Industrial Design

Design: Meaning and Concept of Novel and Original

Procedure for Registration, Effect of Registration and Term of Protection

Geographical Indication (GI)

Geographical Indication: Meaning, Types and Difference between GI and Trademarks

Procedure for Registration, Effect of Registration and Term of Protection

Plant Variety Protection

Plant Variety Protection: Meaning and Benefit Sharing and Farmers' Rights

Procedure for Registration, Effect of Registration and Term of Protection

Layout Design Protection

Layout Design Protection: Meaning

Procedure for Registration, Effect of Registration and Term of Protection

Traditional Knowledge

Indigenous, Medicinal, Bioprospecting Knowledge Examples,

Need for Protection

Trade Secret

Trade Secrets Law, Determination of Trade Secret Status

Liability for Misappropriations of Trade Secrets, Protection for Submission

Module 6: Current Contour

[4L]

India's New National IP Policy, 2016 Govt.

of India step towards promoting IPR Govt.

Schemes in IPR

LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

This course will provide a view of enzyme chemistry and kinetics along with the methods and strategies for enzyme purification and characterization. One section also deals with the applications of enzymes in diagnostics.

Course outcome:

C01: Able to distinguish the fundamentals of enzyme properties, nomenclatures, characteristics and mechanisms

C02: Able to discuss the factors affecting enzymatic reactions. Describe the concepts of co-operative behaviour, enzyme inhibition and allosteric regulation.

C03: Able to describe the major applications of enzymes in industry, understand the principles of enzyme immobilisation techniques and enzyme extraction procedures.

C04: Able to develop new ideas for the development of enzyme-based drugs. Discuss various application of enzymes that can benefit human life

C05: Able to discover the current and future trends of applying enzyme technology for the commercialization purpose of biotechnological products.

Course Content:

Module 1:

[12L]

Isolation, crystallization and purification of enzymes, test of homogeneity of enzyme preparation, methods of enzyme analysis. Enzyme classification (rationale, overview and specific examples) Zymogens and their activation (Proteases and Prothrombin).

Enzyme substrate complex: concept of E-S complex, binding sites, active site, specificity, Kinetics of enzyme activity, Michaelis-Menten equation and its derivation, Different plots for the determination of K_m and V_{max} and their physiological significance, factors affecting initial rate, E, S, temp. & pH. Collision and transition state theories, Significance of activation energy and free energy.

Module 2:

[6L]

Two substrate reactions (Random, ordered and ping-pong mechanism) Enzyme inhibition types of inhibition, determination of K_i , suicide inhibitor. Mechanism of enzyme action: General mechanistic principle, factors associated with catalytic efficiency: proximity, orientation, distortion of strain, acid-base, nucleophilic and covalent catalysis. Techniques for studying mechanisms of action, chemical modification of active site groups, specific examples-: chymotrypsin, lysozyme, GPDH, aldolase, RNase, Carboxypeptidase and alcohol dehydrogenase. Enzyme regulation: Product inhibition, feedback control, covalent modification.

Learning objectives:

The objective of the course is to make the student familiar to the procedures used in a Laboratory of Molecular Diagnostics. The course will describe the techniques commonly used in diagnostics and molecular pathology laboratories and the underlying principles and applications, advantages and limitations of each technique

Course outcome:

CO1: Able to identify the role and importance of molecular diagnostics such as real-time PCR, epidemiological genotyping, microfluidics, bio-imaging, sequencing technologies and immuno-diagnostics

CO2: Able to assess the benefit of research and development practices within a biotechnology company

CO3: Able to incorporate both in silico and lab-based techniques as part of a combined molecular diagnostics strategy.

CO4: Able to perform selected laboratory techniques, interpret results and prepare reports.

Course Content:

Module 1:

[12L]

Enzyme Immunoassays: Comparison of enzymes available for enzyme immunoassays, conjugation of enzymes. Solid phases used in enzyme immunoassays. Homogeneous and heterogeneous enzyme immunoassays. Enzyme immunoassays after immuno blotting. Enzyme immuno histochemical techniques. Use of polyclonal or monoclonal antibodies in enzymes immuno assays. Applications of enzyme immunoassays in diagnostic microbiology

Module 2:

[9L]

Molecular methods in clinical microbiology: Applications of PCR, RFLP, Nuclear

hybridization methods, Single nucleotide polymorphism and plasmid finger printing in clinical microbiology

Laboratory tests in chemotherapy: Susceptibility tests: Micro-dilution and macro-dilution broth procedures. Susceptibility tests: Diffusion test procedures. Susceptibility tests: Tests for bactericidal activity. Automated procedures for antimicrobial susceptibility tests.

MODULE 3:

[9L]

Automation in microbial diagnosis, rapid diagnostic approach including technical purification and standardization of antigen and specific antibodies. Concepts and methods in idiotypes. Anti-idiotypes and molecular mimicry and receptors. Epitope design and applications. Immunodiagnostic tests. Immuno fluorescence. Radioimmunoassay.

MODULE 4:

[6L]

GLC, HPLC, Electron microscopy, flow cytometry and cell sorting. Transgenic animals.

Course Title	BIOFERTILIZERS AND BIOPESTICIDE
---------------------	---------------------------------

Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

The course aims to provide detail understanding of biopesticides and biocontrol agents. It will highlight on how microorganisms can be used to maintains soil health.

Course outcome:

C01: Able to acquaint with the importance of bio-pesticides in present scenario.

C02: Able to understand concept and classification of biocontrol strategies

C03: Able to understand role of bio-fertilizers in quality parameters of various agricultural products and key role of bio-fertilizer in maintain soil health.

C04: Able to understand bioethical issues of releasing GMOs

Course Content:

Module 1: Bio fertilizers

[10L]

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers.

Symbiotic N₂ fixers: *Rhizobium* - Isolation, characteristics, types, inoculum production and field application, legume/pulses plants

Frankia - Isolation, characteristics, Alder, Casurina plants, non-leguminous crop symbiosis. Cyanobacteria, *Azolla* - Isolation, characterization, mass multiplication, Role in rice cultivation, Crop response, field application.

Module 2: Non - Symbiotic Nitrogen Fixers

[6L]

Free living *Azospirillum*, *Azotobacter* - free isolation, characteristics, mass inoculums, production and field application

Module 3: Phosphate Solubilizers

[6L]

Phosphate solubilizing microbes - Isolation, characterization, mass inoculum production, field application

Module 4: Mycorrhizal Biofertilizers

[6L]

Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass inoculum production of VAM, field applications of Ectomycorrhizae and VAM.

Module 5: Bioinsecticides

[8L]

General account of microbes used as bioinsecticides and their advantages over synthetic pesticides, *Bacillus thuringiensis*, production, Field applications, Viruses – cultivation and field applications.

Course Code	
Course Title	CONSTITUTIONAL LAW
Category	VALUE ADDED COURSE

LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Course Objective:

The objective is to understand the enforcement of fundamental rights, directive principles of state policy and legal recourse open whenever the rights are infringed.

Course Outcome:

C01 Students will learn about their fundamental rights enshrined under the Constitution. **C02** Students will learn the policies enumerated to state for implementation according to Directive Principles of State Policy.

C03 Students will learn about their fundamental duties and the punishable code through which the Indian citizen will be punished if they don't follow those.

C04 Students will learn about constitutional remedies.

Course Content:

Module I: Introduction to the Constitution and Constitutional Law of India

Historical background to the Making of the Constitution of India

Preamble of the Constitution of India-

- ✓ 'Sovereign Socialist Secular'
- ✓ 'Democratic Republic'
- ✓ 'Separation of Powers'
- ✓ 'Rule of Law'
- Federalism: Meaning, Scope and Concepts
- Indian federal structure according to Indian Constitution.
- Separation of Powers- conceptual analysis, comparison with US model

Module II: Citizenship and Fundamental Rights (Art 12-35)

- Meaning of Citizenship
- Citizenship at the commencement of the constitution (Article 5,6,7)
- Citizenship under the Citizenship Act, 1955
- Origin and development of Fundamental Rights
- Widest interpretation of Provision of Part III
- Suspension of Fundamental Rights
- Definition of "State" (Article 12)
- Law inconsistent with Fundamental Rights (Article- 13)

- Doctrine of Severability – Doctrine of Eclipse – Doctrine of waiver
- Right to Equality (Article 14-18)
- Right to Freedom (Article 19-22)
- Protection of Life and Personal Liberty (Article 21)
- Right against Exploitation (Article 23-24)
- Right to Freedom of Religion (Article 25-28)
- Cultural and Educational Rights (Art 29-30)

- Right to Constitutional Remedies (Art 32-35)

Module III: Directive Principle of State Policy (Art 36-51) and Fundamental Duties (Article 51A)

Introduction; Objective of DPSP, Modes of DPSP, Relation between DPSP and FR, DPSP given status of FR, Fundamental Duties- An aid to Interpretation of constitutional Provisions

Module IV: The Three Wings of Government

- Legislature: Structure of Parliament and State Legislatures, Mode of Election, Parliamentary Procedures, Voting, Powers and Functions- (Article 79-122, 148-151)
- Executive: Structure of Union and State Governments, Cabinet, Powers and Functions of PM / CM (Article 52-78, 123)
- Judiciary: Structure of the Courts, Jurisdiction, Appointment of Judges, Supreme Court as the Final Interpreter of the Constitution, Powers and Functions (Article 124-147, 214-227)

Module V: Judiciary and its Independence (Art 124-147, 214-227) and Executive and its Discretion (Article 52-78, 123)

- Independence of Judiciary: why so crucial?
- Transfer of Judges
- Judicial Review- HC powers of Superintendence u/A. 226., Supervision u/A. 227, Jurisdictions of the SC, Review and Curative Petition, Supreme Court as a Court of Record- Contempt Power
- President as the 'nominal head' of the Executive
- 'Aid and advice of the council of ministers'-Discretionary Powers of the President and Governors
- Powers of Pardon
- Legislative Power of the Executive

Module VI: Amendment to the Constitution and Basic Structure Doctrine and Emergency Provisions

- Understanding A. 368
- 'Procedure to Amend' to 'Power to Amend'
- Impact of 24th and 25th Amendments
- 42nd Amendment and the A. 368
- Evolution of Basic Structure Doctrine

- Pre-Keshavananda Bharati
- Post-Keshavananda Bharati
 - ✓ Proclamation of Emergency under A. 352: Instances and Debates, Changes introduced by the 44th Amendment
 - ✓ President's Rule under A. 356: Instances and Debates, Judicial Review

Bare Acts:

- Constitution of India, 1950

Suggested Readings:

1. M.P.Jain, Indian Constitutional Law, Wadhwa & Co, Nagpur
2. V.N.Shukla, Constitution of India, Eastern Book Company, Lucknow
3. Granville Austin, Indian Constitution-Cornerstone of a Nation, OUP, New Delhi
4. H.M.Seervai, Constitutional Law of India (in 3 Volumes), N.M.Tripathi, Bombay

Course Title	PUBLIC HEALTH AWARENESS			
Category	VALUE ADDED COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning Objectives:

In-depth understanding of the key concepts, challenges, and strategies involved in promoting public health at the community and population levels. To explore various public health issues, the importance of health awareness, and effective communication techniques to promote health awareness and preventive measures.

Course Outcomes:

C01: Understanding the concepts of public health principles, including disease prevention, health promotion, and the social determinants of health.

C02: Developing communication skills to design and deliver public health messages to audiences.

C03: Learning behaviour change theories and techniques to encourage positive health behaviours and lifestyle modifications within communities.

C04: Assessing effectiveness of public health awareness initiatives through data collection and analysis, ensuring campaigns achieve their intended goals and outcomes.

Module I: Introduction to Public Health Awareness

[12 L]

Understanding Public Health, Definition and scope of Public Health, Historical milestones and key figures in Public Health, The significance of Public Health in promoting population health; **Determinants of Health:** Social determinants of health and their impact on well-being, Behavioural and environmental determinants of health, Health disparities and the role of Public Health in addressing them; **Strategies for Effective Health Communication:** Theories of health behaviour change, Identifying

target audiences and cultural competence, Communication channels and platforms for public health campaigns, Designing impactful messages and storytelling techniques; **Planning and Evaluating Public Health Campaigns:** Steps in developing a public health awareness campaign, Setting measurable objectives and goals, Designing effective health promotion campaigns, Monitoring, measuring, and evaluating campaign success; **Health Promotion and Disease Prevention:** Health Promotion Theories and Models, Understanding behaviour change theories, Application of health promotion models in Public Health programs.

Module II: Introduction to Disease Emergence and Re-emergence [12 L]

Definition and distinction between disease emergence and re-emergence, Historical examples of notable emerging and re-emerging infectious diseases, Factors contributing to the spread of diseases in a globalized world; **Zoonotic Diseases and Spill over Events:** Understanding zoonotic diseases and their origins in animal populations, Drivers of zoonotic spill over events to human populations; **Environmental Factors and Disease Spread:** Impact of environmental changes on disease emergence, Climate change, deforestation, and disease transmission, **Identifying environmental health hazards:** Bio aerosols, Air borne microorganisms (Bacteria, Viruses, Fungi) and their impact on human health and environment; **Antimicrobial Resistance (AMR):** Overview of antimicrobial resistance and its implications for disease control, Factors contributing to the development and spread of AMR, Public health strategies to combat antimicrobial resistance; **One Health Approach:** Understanding the One Health concept and its significance in disease control, Collaboration between human, animal, and environmental health sectors, Case studies exemplifying successful One Health initiatives.

Module III: Public Health Challenges and Solutions

[12 L]

Infectious Disease Control, Overview of infectious diseases and their transmission, Outbreak investigation and response, Vaccination programs and their role in preventing infectious diseases; **Non-Communicable Diseases (NCDs):** Understanding the burden of NCDs, Risk factors and prevention strategies for NCDs, Public Health policies to address NCDs; **Maternal and Child Health:** Maternal and child health indicators and

disparities, Prenatal care and maternal well-being, Child development and early interventions; **Mental Health Awareness:** Prevalence and impact of mental health disorders, Promoting mental health and well-being, Reducing stigma surrounding mental health; **Preventive Strategies and Interventions:** Screening programs and their importance in disease prevention, Immunization and herd immunity, Lifestyle modifications for disease prevention.

Course Title	METABOLISM			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Knowledge of biomolecules			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of biochemistry and metabolism.

Course Outcome:

C01: Inculcate an understanding of the function of biological molecules through the study of their molecular structure, and interaction with other biomolecules.

C02: Develop a documented understanding of the chemical and regulatory interrelationship between major cellular synthetic and catabolic pathways by participating in class discussions, and completing quizzes and exams.

C03: Demonstrate an awareness of the impact of biochemistry on the environment, society, and other cultures outside the scientific community.

C04: Inquisitiveness to find application of biochemistry in medical and biological field settings.

Course Content:

Module 1: Carbohydrate metabolism

[12L]

Glycolysis: Overview, reactions of glycolysis, fermentation, fates of pyruvate, feeder pathways for glycolysis, energetics of glycolysis, cori cycle, galactosemia, regulation of glycolysis and gluconeogenesis, pentose phosphate pathway and its importance, glycogenesis glycogenolysis, regulation of glycogen metabolism, glycogen storage diseases.

Citric acid cycle: Production of acetyl CoA, reactions of citric acid cycle, anaplerotic reactions, amphibolic role, regulation of citric acid cycle, glyoxalate pathway, coordinated regulation of glyoxalate and citric acid pathways.

Module 2: Fatty acid metabolism

[12L]

Digestion, mobilisation and transport of cholesterol and triacyl glycerols, fatty acid transport to mitochondria, β oxidation of saturated, unsaturated, odd and even numbered and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal oxidation, ω oxidation, ketone body's metabolism, ketoacidosis. Fatty acid synthase complex. Synthesis of saturated, unsaturated, odd and even chain fatty acids and regulation. Eicosanoids, cholesterol, steroids and isoprenoids

Module 3: Amino Acid and Nucleic Acid Metabolism

[12L]

Overview of metabolism, amino acid deamination, urea cycle, metabolic breakdown of amino acids, amino acid synthesis, amino acids of biosynthetic precursors, biochemistry of nitrogen fixation, Overview, synthesis of Purine and Pyrimidine Ribonucleotides, Formation of deoxyribonucleotides, nucleotide degradation, biosynthesis of nucleotide coenzymes, disorders of purine and pyrimidine metabolism –Lesch- Nyhan syndrome, Gout, SCID, adenosine deaminase deficiency.

Module 4: Electron Transport Chain & Oxidative phosphorylation [12L]

Mitochondria, Electron transport chain (ETC), Q cycle, Oxidation, reduction reactions, inhibitors of ETC, uncouplers, chemiosmotic hypothesis, proton motive force, structure and function of F₀F₁ ATP synthase, mechanism of ATP synthesis, ATP-ADP translocase, malate-aspartate shuttle, glycerol-3-phosphate shuttle regulation of oxidative phosphorylation, ROS production and antioxidant mechanisms.

Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of biochemistry and metabolism.

Course Outcome:

C01: Ability to draw on classroom knowledge and laboratory classes to make an individual contribution in a research laboratory.

C02: Ability to draw on classroom knowledge and laboratory classes to make an individual contribution in a research laboratory

C03: Correlate the theoretical basis of the tools, technologies and methods common to Biochemistry.

Suggestive List of Experiments:

- | | |
|--|----------|
| 1. Validation of Beer-Lambert Law | [2 days] |
| 2. Analysis of lipid by TLC | [2 days] |
| 3. Analysis of amino acids by TLC | [2 days] |
| 4. Enzymatic assay of salivary amylase (effect of pH, temperature) | [2 days] |
| 5. Enzymatic assay (determination of K_m and V_{max}) | [2 days] |
| 6. SDS PAGE | [2 days] |

Course Title	ORGANIC CHEMISTRY II			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 chemistry knowledge			

Course Objective:

The concepts developed in this course will aid in quantification of several concepts in chemistry that have been introduced at the 10+2 levels in schools. Technology is being increasingly based on the electronic, atomic and molecular level modifications.

Course Outcomes:

CO1: Able to describe the fundamental properties of atoms & molecules, atomic structure and periodic properties and acid-bases concepts.

CO2: Able to apply fundamental concepts of thermodynamics, electrochemistry in different engineering applications.

C03: Develop the knowledge of modern organic chemistry in different engineering applications.

C04: Able to apply the knowledge of water quality parameters, corrosion control & polymers to different industries and Design economically and new methods of synthesis nano materials.

C05: Able to determine the structure of organic molecules using different spectroscopic techniques.

Course Content:

Module I: Nitrogen Containing Functional Groups (10L)

Preparation and important reactions of nitro and compounds, nitriles and isonitriles Amines: Effect of substituent and solvent on basicity; Preparation and properties: Gabriel phthalimide synthesis, Carbylamine reaction, Mannich reaction, Hoffmann's exhaustive methylation, Hofmann-elimination reaction; Distinction between 1°, 2° and 3° amines with Hinsberg reagent and nitrous acid. Diazonium Salts: Preparation and their synthetic applications.

Module II: Alcohols, Phenols, Ethers and Epoxides(12L)

Alcohols: preparation, properties and relative reactivity of 1°, 2°, 3° alcohols, Bouvaelt-Blanc Reduction; Preparation and properties of glycols: Oxidation by periodic acid and lead tetraacetate, Pinacol-Pinacolone rearrangement;

Phenols: Preparation and properties; Acidity and factors effecting it, Ring substitution reactions, Reimer-Tiemann and Kolbe's-Schmidt Reactions, Fries and Claisen rearrangements with mechanism;

Ethers and Epoxides: Preparation and reactions with acids. Reactions of epoxides with alcohols, ammonia derivatives and LiAlH_4 .

Module III: Carbonyl Compounds (14L)

Structure, reactivity and preparation; Nucleophilic additions, Nucleophilic addition-elimination reactions with ammonia derivatives with mechanism; Mechanisms of Aldol and Benzoin condensation, Knoevenagel condensation, Claisen-Schmidt, Perkin, Cannizzaro and Wittig reaction, Beckmann and Benzil-Benzilic acid rearrangements, haloform reaction and Baeyer Villiger oxidation, α -substitution reactions, oxidations and reductions (Clemmensen, Wolff-Kishner, LiAlH_4 , NaBH_4 , MPV, PDC and PGC); Addition reactions of unsaturated carbonyl compounds: Michael addition. Active methylene compounds: Keto-enol tautomerism. Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate.

Module IV: Carboxylic Acids and their Derivatives (12L)

Preparation, physical properties and reactions of monocarboxylic acids: Typical reactions of dicarboxylic acids, hydroxy acids and unsaturated acids: succinic/phthalic, lactic, malic, tartaric, citric, maleic and fumaric acids; Preparation and reactions of acid chlorides, anhydrides, esters and amides; Comparative study of nucleophilic substitution at acyl group -Mechanism of acidic and alkaline hydrolysis of esters, Claisen condensation, Dieckmann and Reformatsky reactions, Hofmann bromamide degradation and Curtius rearrangement.

Course Code	YMI2102			
Course Title	ORGANIC CHEMISTRY II LABORATORY			
Category	MINOR COURSE			
	L	T	P	Credits

LTP & Credits	0	0	3	3
--------------------------	---	---	---	---

Total Contact Hours	36
Pre-requisites	10+2 chemistry knowledge

Learning objective:

To impart scientific approach and to familiarize with the experiments in chemistry relevant and to Provide the students with a solid foundation in Chemistry laboratory required to solve biotechnological problems and practical implementation of fundamental concepts

Course Outcomes:

Students will gain an understanding of:

CO 1: how to perform common laboratory techniques, including reflux, distillation, steam distillation, recrystallization, vacuum filtration, aqueous extraction, thin layer chromatography, column chromatography

CO 2: how to predict the outcome and mechanism of some simple organic reactions, using a basic understanding of the relative reactivity of functional groups

Suggested list of experiments:

1. Functional group tests for alcohols, phenols, carbonyl and carboxylic acid group.

2. Organic Preparations:

- i. Acetylation of one of the following compounds: amines (aniline, *o*-, *m*-, *p*-toluidines and *o*-, *m*-, *p*-anisidine) and phenols (β -naphthol, vanillin, salicylic acid) by any one method:
 - a. Using conventional method.
 - b. Using green approach
- ii. Benzoylation of one of the following amines (aniline, *o*-, *m*-, *p*-toluidines and *o*-, *m*-, *p*-anisidine) and one of the following phenols (β -naphthol, resorcinol, *p*-cresol) by Schotten-Baumann reaction.
- iii. Oxidation of ethanol/ isopropanol (Iodoform reaction).
- iv. Bromination of any one of the following: a. Acetanilide by conventional methods, b. Acetanilide using green approach (Bromate-bromide method)
- v. Nitration of any one of the following: a. Acetanilide/nitrobenzene by conventional method, b. Salicylic acid by green approach (using ceric ammonium nitrate).
- vi. Selective reduction of *meta*-nitrobenzene to *m*-nitroaniline.
- vii. Reduction of *p*-nitrobenzaldehyde by sodium borohydride.
- viii. Hydrolysis of amides and esters.

Course Title	FUNDAMENTALS OF PHYSICS			
Category	INTERDISCIPLINARY COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 physics knowledge			

Learning objectives:

This course offers a through introduction to the concept and techniques of Physics along with the possible applications in bioscience. Problem solving and quantitative reasoning are emphasized.

Course Outcome:

C01: Able to update their knowledge about the basic principle of Newtonian mechanics and apply the knowledge of flow of liquid and surface tension on liquid surface.

C02: Able to analyze differential equations of electrostatic and magnetostatic, scalar and vector potential, electric and magnetic fields and also understand the laws of thermodynamics.

C03: Able to explain the electronic structure in atoms using different spectra.

C04: Able to understand the various lasers systems and their applications.

Course Content:

Module 1:

[14L]

Mechanics: Representation of vector, scalar and vector fields, partial derivative of vector, gradient of scalar field, divergence and curl of vector field, Newton's Law, Central force, Two body Collisions, Rigid Body, Moment of Inertia

Properties of Matter: Surface tension, elasticity, viscosity, adsorption, diffusion. Fluids: Definition, Pressure and Density. Pascal's Principle. Measurement of pressure.

Module 2:

[16L]

Electrostatic and Magnetism: Electric charge and fields, electric potential, electric dipole, Gauss law, capacitors, electrostatic energy. The magnetic fields, The definition of B. Gauss' law of magnetism. Magnetic flux, Faraday's law of electromagnetic induction, electromotive force, Ampere's circuital law, Maxwell's equation. magnetic permeability, magnetic susceptibility, classification of magnetic materials, Magnetism of earth. Paramagnetism. Diamagnetism. Ferromagnetism.

Thermodynamics: laws of thermodynamics and their consequences, activation energy, systems as open, non-equilibrium systems, Concept of free energy, unavailable energy and entropy, Enthalpy, Negative entropy as applicable to biological systems, thermodynamic potential.

Module 3:

[8L]

Atomic structure: Historical background up to Bohr model. Significance of second and third postulate of Bohr's model. Quantization of energy levels using Rydberg's constant, Bohr – Sommerfeld model. Quantum numbers, Pauli's exclusion principle, Constituents of atomic nuclei, Isotopes, Isobars, Isotones, Isomers,

Module 4:

[10L]

Wave optics: Reflection and refraction of plane waves, Interference, Diffraction, Polarization, and Young's experiment

Laser and Applications: Physical aspects of medical imaging, LASER beam in biology & medicine, Fundamentals of laser physics, Medical lasers (Carbon Dioxide Laser, Nd:YAG Laser,). Applications of Lasers in therapy and diagnosis

Optical Fiber: Principles – Physical, structure and types – Optical fibre communication

Course Title	ENGLISH ADVANCE			
Category	ABILITY ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	None			

Learning Objectives:

The aim of the course is to enable the learner to communicate effectively and appropriately in real life situation and to use English for study purposes.

Course Outcome

C01: To understand the fundamentals of group discussion and to be able to speak with confidence at job interviews.

C02: To impart basic English grammar and essentials of important language skills.

C03: To acquire a working knowledge of writing strategies, formats and templates of professional writing.

CO4: To develop critical comprehension reading strategies and to enhance English vocabulary. Course Content

Course content:

Module 1: Professional Interaction (6L)

Definition, relevance and purpose of group discussion; strategies for an effective GD; mechanism and formats of GD; types of and preparations for job interview; evaluation of performance; myths about job interviews.

Module 2: Grammar (5L)

Voice change; direct and indirect speech; words often confused and misused; common grammatical errors; phrasal verbs and idioms.

Module 3: Writing Skills (5L)

Essay; CV/Resume writing; Technical Report Writing; minutes of meeting; importance of punctuation in writing

Module 4: Vocabulary and Reading (8L)

Reading comprehension; fictional and non-fictional prose; note taking and note making.

1. "Ode to a Nightingale" by John Keats.
2. "Introduction" by Kamala Das
3. "The Last Leaf" by O Henry
4. "Shooting an Elephant" by George Orwell

Course Title	STRUCTURAL BIOINFORMATICS			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of structural bioinformatics and their experimental basis, and to enable students to acquire a specialized knowledge and understanding of macromolecular structure, homology modelling, structure analysis etc.

Course Outcome:

C01: Inculcate an understanding of the function of biological macromolecules through the study of their molecular structure, and interaction with other biomolecules.

C02: Develop a documented understanding of the protein structure, function by participating in class discussions, and completing quizzes and exams.

C03: Demonstrate an awareness of the impact of computational biology and bioinformatics on the environment, society, and other cultures outside the scientific community.

C04: Inquisitiveness to find application of in drug designing and vaccine development.

Course Content:

Module 1: Protein structure

[12L]

Introduction to protein structure – amino acids, peptide bond, dihedral angle, primary, secondary, tertiary and quaternary structure; Folds and motifs; brief introduction of protein folding pathways and energy landscape; protein diversity; multi-protein complexes; protein – ligand complex; protein – nucleic acid complex; structure and function relation: conformational dynamics and catalytic mechanism (spring loaded mechanism); different methods to determine structure – X ray Crystallography, Cryo-Electron Microscopy, NMR.

Module 2: Protein structure visualization and analysis

[12L]

Protein structure databases; visualization of protein structure; analysis of protein structure; protein structure comparison; protein structure classification; protein structure prediction; visualization and analysis of protein – protein interaction interface; visualization of protein – ligand interaction protein; determining the contribution of H bond and hydrophobic interaction in ligand binding; homology modelling; threading and fold recognition; Ab initio structure prediction.

Module 3: Nucleic Acid / Nucleic Acid-protein structure and applications of structural bioinformatics:

[12L]

Visualization of DNA and RNA structure; different types of RNA structure; RNA structure prediction; visualization and analysis of protein – nucleic interaction and determining the contribution of H bond and hydrophobic interaction; basic introduction to molecular docking, structure guided drug designing, brute force screening, rational drug designing; brief introduction of molecular dynamics simulation workflow, result analysis and visualization of a sample trajectory using standard viewing tool.

Course Title	FERMENTATION TECHNOLOGY			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

The course aims to provide the understanding of basic principle of fermentation process, which help students to design, develop and operate fermentation process at industrial level. This fundamental knowledge is essential for the students to make their career in industry based on bioprocess.

Course outcome:

CO1: Able to understand the basic concepts of industrial microbiology.

CO2: Able to recognize products of industrial microbiology and efficient modification in fermenter design.

CO3: Able to be familiarize with the processes oriented in industry and R&D settings.

CO4: Able to understand the production cycles of various microbial products at lab scale and how to carry it to industrial range.

Course Content:

Module 1:

[8L]

Application of microorganisms for the industrial production of chemicals, biochemicals and chemotherapeutants: Citric acid, Propionic acid, butyric acid, 2 -3 butanediol, gluconic acid, itaconic acid, Biofuels: Biogas, Ethanol, butanol, hydrogen, biodiesel, Microbial polysaccharides; Microbial insecticides; Food additives. Drugs: anti-microbial, anti-cancer, anti-fungal. Biopolymers: Pectin, Bioplastic.

Module 2:

[10L]

Microbial products of pharmacological interest, steriod fermentations and transformations. Over production of microbial metabolite, Secondary metabolism – its significance and products. Metabolic engineering of secondary metabolism for highest productivity. Enzyme and cell immobilization techniques in industrial processing, enzymes in organic synthesis, proteolytic enzymes, hydrolytic enzymes, glucose isomerase, enzymes in food technology/organic synthesis.

Module 3:

[8L]

Purification & characterization of proteins, Upstream and downstream processing, solids and liquid handling. Distribution of microbial cells, centrifugation, filtration of fermentation broth, ultra-centrifugation, liquid extraction, ion-exchange recovery of biological products. Experimental model for design of fermentation systems, Anaerobic fermentations.

Module 4:

[10L]

Rate equations for enzyme kinetics, simple and complex reactions. Inhibition kinetics; effect of pH and temperature on rate of enzyme reactions. Mathematical derivation of growth kinetics, mathematical derivations of batch and continuous culture operations; single stage CSTR; mass transfer in aerobic fermentation; resistances encountered; overall mass transfer co-efficient (K_a) determination, factors depending on scale up principle and different methods of scaling up. Metabolic engineering of antibiotic biosynthetic pathways.

Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

This course aims to provide in depth knowledge of forensic science, it's disciplines and importance and working in forensic science laboratory.

Course outcome:

C01: Able to understand about the basics and different target areas for forensic studies.

C02: Able to understand about the working and functioning of Forensic science laboratories.

Course Content:**Module 1:****[10L]**

C02	3	1	2	-	-	-	-	-		-	-	3

Course Title	ANIMAL BIOTECHNOLOGY			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

This subject focusses on providing students with a theoretical and practical understanding of animal biotechnology. The subject covers animal molecular biology, recombinant DNA technology, production of transgenic animals, reproductive biotechnology, biotechnology in animal breeding and ethics.

Course outcome:

C01: Able to use different molecular biology techniques and genetic engineering to improve sustainability, productivity and suitability for pharmaceutical, agricultural and industrial applications.

C02: Able to learn about different diseases in animal, their pathogenesis and cure.

CO3: Able to understand principles of animal culture, media preparation.

CO4: Able to learn basics of DNA isolation from various sources

Course Content:

Module 1:

[8L]

Gene transfer methods in Animals – Microinjection, Embryonic Stem cell, gene transfer, Retrovirus & Gene transfer.

Module 2:

[10L]

Introduction to transgenesis. Transgenic Animals – Mice, Cow, Pig, Sheep, Goat, Bird, Insect.

Animal diseases need help of Biotechnology – Foot-and mouth disease, Coccidiosis, Trypanosomiasis, Theileriosis.

Module 3:

[10L]

Animal propagation – Artificial insemination, Animal Clones. Conservation Biology – Embryo transfer techniques. Introduction to Stem Cell Technology and its applications.

Module 4:

[8L]

Genetic modification in Medicine - gene therapy, types of gene therapy, vectors in gene therapy, molecular engineering, human genetic engineering, problems & ethics.

Course Code				
Course Title	ENVIRONMENTAL SCIENCE			
Category	VALUE ADDED COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

To give students an understanding of how science and the scientific method work to address environmental problems. The student will become familiar with the Earth's major systems (ecosystems and biogeochemical cycles), how they function and how they are affected by human activity (population growth, air, water and soil pollution, ozone depletion, global warming, solid waste disposal).

Course outcome:

C01: Able to articulate the interconnected and interdisciplinary nature of environmental studies

CO2: Able to demonstrate an integrative approach to environmental issues with a focus on sustainability

CO3: Able to communicate complex environmental information to both technical and non-technical audiences

CO4: Able to understand and evaluate the global scale of environmental problems

Course content:

Module 1: General

[10L]

1.1 Natural Resources: Forest Resource, water resource, mineral resource, energy resources (renewable, non-renewable, potentially renewable)

1.2 Population Growth: Exponential Growth, logistic growth, Maximum sustainable yield

1.3 Disaster Management: Types of disasters (Natural & Man-made), Floods, Earthquake, Tsunamis, Cyclones, landslides (cause, effect & control)

1.4 Ecology & Ecosystem: Elements of ecology, definition of ecosystem- components types and function, Food chain & Food web,

Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems

1.5 Environmental Management: Environmental impact assessment, Environmental laws and protection act of India, Different international environmental agreement.

Module 2: Air pollution and control

[10L]

2.1 Sources of Pollutants: point sources, nonpoint sources and manmade sources primary & secondary pollutant

2.2 Types of air pollutants: primary & secondary pollutant; Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN, Smog (Photochemical smog and London smog),

2.3 Effects on human health & climate: Greenhouse effect, Global Warming, Acid rain, Ozone Layer Depletion

2.4 Air pollution and meteorology: Ambient Lapse Rate, Adiabatic Lapse Rate, Atmospheric stability & Temperature inversion

2.5 control of air pollution (ESP, cyclone separator, bag house, catalytic converter, scrubber (ventury),

Module 3: Water Pollution

[8L]

3.1 Classification of water (Ground & surface water)

3.2 Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, heavy metals, pesticides, volatile organic compounds.

3.3 Surface water quality parameters: pH, DO, 5-day BOD test, BOD reaction rate constants, COD. Numerical related to BOD Lake: Eutrophication [Definition, source and effect].

3.4 Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only), ground water pollution (Arsenic & Fluoride; sources, effects, control)

3.5 Quality of Boiler fed water: DO, hardness, alkalinity, TDS and Chloride

3.7 Layout of waste water treatment plant (scheme only).

Module 4: Land Pollution

[4L]

4.1 Types of Solid Waste: Municipal, industrial, commercial, agricultural, domestic, hazardous solid wastes (bio-medical), E-waste

4.2 Solid waste disposal method: Open dumping, Land filling, incineration, composting, recycling (Advantages and disadvantages).

Module 5: Noise Pollution

[4L]

5.1 Definition of noise, effect of noise pollution on human health,

5.2 Average Noise level of some common noise sources

5.3 Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L10 (18 hr Index).

5.4 Noise pollution control.

Course Title	ETHNOMEDICINE			
Category	VALUE ADDED COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning objectives:

To gather knowledge about ethno medicinal properties of natural products and their uses in ancient time as well as in future.

Course outcome:

CO 1: Able to express the historical development of ethno medicinal values of natural products.

CO 2: Able to recognize and identify important plant species with ethno medicinal properties.

CO 3: Able to explain ethno botanically uses of plants. Detail their native habitats and cultivated lands.

Course content:

Module 1: [6L]

Ethnomedicine – definition, history and its scope – Inter disciplinary approaches in ethnobotany – Collection of ethnic information.

Module 2: [6L]

Importance of medicinal plants – role in human health care – health and balanced diet (Role of proteins, carbohydrates, lipids and vitamins).

Module 3: [8L]

Tribal medicine – methods of disease diagnosis and treatment – Plants in folk religion – *Aegle marmelos*, *Ficus benghalensis*, *Curcuma domestica*, *Cyanodon dactylon* and *Sesamum indicum*.

Module 4: [10L]

Traditional knowledge and utility of some medicinal plants– *Solanum trilobatum*, *Cardiospermum halicacabum*, *Vitex negundo*, *Adathoda vasica*, *Azadirachta indica*, *Gloriosa superba*, *Eclipta alba*, *Aristolochia indica*, *Phyllanthus fraternus* and *Boerhaavia diffusa*.

Module 5:

[6L]

Plants in day today life – Ocimum sanctum, Centella asiatica, Solanum trilobatum, Cassia auriculata, Aloe vera. Nutritive and medicinal value of some fruits (Guava, Sapota, Orange, Mango, Banana, Lemon, Pomegranate) and vegetables - Greens (Moringa, Solanum nigrum) Cabbage.

Course Title				MUSHROOM CULTURE								
Category				VALUE ADDED COURSE								
LTP & Credits				L	T	P	Credits					
				3	0	0	3					
Total Contact Hours				36								
Pre-requisites				None								

Learning objectives:

Enable the students to identify edible and poisonous mushrooms

Provide hands on training for the preparation of bed for mushroom cultivation and spawn production

Give the students exposure to the experiences of experts and functioning mushroom farms

Help the students to learn a means of self-employment and income generation

Course outcome:

By successfully completing the course, students will be able to:

CO1: Identify edible types of mushroom

CO2: Gain the knowledge of cultivation of different types of edible mushrooms and spawn production

CO3: Manage the diseases and pests of mushrooms

CO4: Learn a means of self-employment and income generation

Course content:

Module 1: Introduction to mushrooms (8 hours)

Mushrooms -Taxonomical rank -History and Scope of mushroom cultivation - Edible and poisonous Mushrooms-Vegetative characters; Common edible mushroom: Button mushroom (*Agaricus bisporus*), Milky mushroom (*Calocybe indica*), Oyster (*Pleurotus sajorcaju*) and paddy straw mushroom (*Volvariella volvcea*); Medicinal mushrooms.

Module 2: Mushroom cultivation techniques (8 Hours)

Mushroom Farm design and layout, Sterilization of substrates, casting material, Spawn production and preparation, production of pure culture, mother spawn and multiplication of spawn. Principle and method of Composting, mushroom bed preparation. Spawning, spawn running, harvesting. Cultivation of oyster and paddy straw mushroom. Problems in cultivation - diseases, pests and nematodes, weed moulds and their management strategies. Health benefits of mushroom: Nutritional and medicinal properties of mushrooms. Therapeutic aspects- antitumor effect.

Module 3: Post harvest technology (4 Hours)

Preservation of mushrooms - freezing, dry freezing, drying, canning, quality assurance and entrepreneurship. Value added products of mushrooms.

Module 4: Training/ Workshop/ Field visit (12 Hours)

Sterilization and sanitation of mushroom house, instruments and substrates. Preparation of mother culture, media preparation, inoculation, incubation and spawn production. Cultivation of oyster mushroom using paddy straw/agricultural wastes

Pre-requisites		None								

Learning objectives:

This course deals with characteristics, properties and biological significance of the microbes. In depth knowledge of the regulation of different metabolic processes in microorganisms.

Course outcome:

CO1: Able to understand the basic microbial structure and function and study the comparative characteristics of prokaryotes and eukaryotes.

CO2: Able to understand the structural similarities and differences among various groups of bacteria.

CO3: Able to gain knowledge of various Culture media, growth conditions.

CO4: Able to comprehend the various methods for identification of unknown

Microorganisms

CO5: To understand how to handle microorganisms in appropriate biosafety levels and to maintain sterility in the laboratory.

Course Content:

Module 1: [14L]

Fundamentals, History and Evolution of Microbiology. Classification of microorganisms:

Microbial taxonomy, criteria used to include molecular approaches, Microbial phylogeny and current classification of bacteria.

Effect of Environment on Microbial Growth

Nutrient uptake and Transport

Aerobic and Anaerobic Respiration

Microbial Diversity: Distribution and characterization Prokaryotic and Eukaryotic cells,

Morphology and cell structure of major groups of microorganisms eg. Bacteria, Algae, Fungi, Protozoa.

Module 2: [10L]

General structure and characteristics and nature of Archaeobacteria, Eubacteria, Protozoa, Algae, Fungi.

Module 3: [12L]

Cultivation and Maintenance of microorganisms: Nutritional categories of micro- organisms, methods of isolation, Purification and preservation.

Microbial growth: Growth curve, Generation time, synchronous batch and continuous culture, measurement of growth and factors affecting growth of bacteria.

Microbial Metabolism: Metabolic pathways, amphibolic and biosynthetic pathways

Bacterial Reproduction: Binary fission, Budding and Fragmentation.

Bacterial way of perennation: Encystment and Sporulation

Natural genetic recombination: Transformation, Transduction, Conjugation

Module 4: [10L]

Microbial control techniques Terms: Sterilization, Disinfection, Germicide/microbicide, Sepsis, Sanitization

Sterilization techniques:

(A) Physical methods:

(a) Heat: (i) Dry heat (ii) Moist heat

(b) Radiation: (i) Non-ionising radiation (Ultraviolet radiation) (ii) Ionising radiation (X-ray, gamma ray)

(c) Filtration; Pasteurization, Autoclave

(B). Chemical methods.

Biosafety levels in laboratory

Module5:

[8L]

Bio indicator of drinking water: Coliforms and Fecal Coliforms. Waste Water management.

Food Microbiology: Important microorganism in food Microbiology: Moulds, Yeasts, bacteria. Major food born infections and intoxications, Preservation of various types of foods. Fermented Foods.

Learning objectives:

The course aims to provide details understanding and hand on training on techniques used in microbiology.

Course outcome:

CO1: Able to identify microorganisms

CO2: Able to characterize microorganisms

CO3: Able to isolate microorganisms from different sources

Suggestive list of experiments:

1. Isolation of bacteria & their biochemical characterization. **[2 days]**
2. Staining methods: simple staining, Gram staining, spore staining, negative staining, hanging drop. **[5 days]**
3. Preparation of media & sterilization methods. Methods of Isolation and enumeration of bacteria from different sources (air, water, food). **[3 days]**
4. Determination of bacterial cell size and shape. **[1 day]**
5. Bacterial growth curve **[2 days]**

Course Title	PHYSICAL CHEMISTRY			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 chemistry knowledge			

Learning objective:

To empower students with basic and applied knowledge of physical chemistry.

Course outcome:

Students will gain an understanding of:

CO 1: concepts in thermodynamics, different thermodynamic quantities such as heat and work and how they are measured, related or transformed from one to the other

CO 2: chemical equilibrium and its relationship with thermodynamic quantities

CO 3: the transport of ions and thermodynamic functions with applications to electron transfer in biological systems

CO 4: chemical kinetics; how reaction rates are measured and represented in rate laws, and applications of chemical kinetics in studying enzyme mechanisms

Course content:

Module I: Real gases, Thermodynamics and Viscosity: (16L)

Deviations from ideal behavior vander Waal's equation. Andrews experiment, critical phenomena in light of Vander wall's equation of state, community of state.

First law of thermodynamics: Cyclic process, Reversible & irreversible process, internal energy, enthalpy, work done in isothermal & adiabatic process, heat capacities, $C_p - C_v = R$ for an ideal gas.

Second law of thermodynamics: Carnot cycle, Elementary treatment of entropy, free energy, work function & criterion of equilibrium. Gibbs Helmholtz equation, Clausius Clapeyron equation and its application.

Viscosity: Definition & determination of Oswald's viscometers, variation with temperature for liquid and gases.

Module II: Chemical equilibrium and Ionic Equilibrium and solutions: (12L)

Law of mass action and equilibrium constant K_p , K_c , K_x and their relationship. Le-chatelier principal- effect of temperature, pressure and addition of products of relation and inert gases. Vant's hoff equation (derivation not required) and its application. Strong and weak electrolytes degree of dissociation. Ostwald's dilution law. Hydrolysis, buffer, calculation of pH, salt effect, elementary, elementary idea of activity & activity

co-efficient of electrolytes, ionic strength, buffer reaction of blood. Rault's law, ideal solution, non-ideal solution, and qualitative treatment of colligative properties relative lowering of vapour pressure, elevation of boiling point, and osmotic pressure-their application in finding molecular weight. Van't Hoff 'i' factor, plasmolysis, haemolysis, isotonic solution, normal saline, role of osmosis in living organism.

Module III: EMF: (10L)

Electro chemical cells, half-cell, electrodes potential standard electrode potential, Nernst equation, redox potential, reference electrode, standard cell, measurement of emf, determination of pH, potentiometric titration, storage battery, corrosion.

Module IV: Chemicals Kinetics: (10L)

Rate, order and molecularity of a reaction, rate constants of first and second order reactions, half-life period, influence of temperature on reaction rate, activation energy, determination of order of a reaction. Homogeneous catalysis: Criterion of catalysis, mechanism of catalytic action, enzyme catalysis, industrial catalyst.

	0	0	3	2
Total Contact Hours	36			
Pre-requisites	10+2 chemistry knowledge			

Learning objective:

Hands on training on surface tension, viscosity, pH, diffraction pattern.

Course outcome:

CO1: Will be able to study the theories of common physical chemistry experiments

CO2: Will be able to prepare the solutions for the experiment

CO3: Will be able to perform the experiment and record the data in tabular form

CO4: Will be able to analyze the results and plot of graphs UNIT-V present the principles, methodologies, observations and calculation in the laboratory notebook in a scientific manner

Suggested list of experiments:

1. Surface Tension Measurements

- Determine the surface tension by (i) drop number (ii) drop weight method
- Study the variation of surface tension of detergent solutions with concentration

2. Viscosity Measurement using Ostwald's Viscometer

- Determination of viscosity of aqueous solutions of (i) polymer (ii) ethanol and (iii) sugar at room temperature.
- Study the variation of viscosity of sucrose solution with the concentration of solute

3. Indexing of a given powder diffraction pattern of a cubic crystalline system

4. pH-metry

- Study the effect on pH of addition of HCl/NaOH to solutions of acetic acid, sodium acetate and their mixtures
- Preparation of buffer solutions of different pH
 - Sodium acetate-acetic acid
 - Ammonium chloride-ammonium hydroxide
- pH metric titration of (i) strong acid vs. strong base, (ii) weak acid vs. strong base
- Determination of dissociation constant of a weak acid

Any other experiment carried out in the class.

Category	INTERDISCIPLINARY COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 mathematics knowledge			

Learning Objective(s):

The objective of this course is to introduce students to statistical methods and to understand the underlying principles. The course will introduce a statistical perspective on information from biology and basic critical skills to assess the quality of research evidence

Course Outcome:

CO1: Able to use various graphical and pictorial representation for presenting data

CO2: Able to understand the theoretical working of probability and statistical concepts.

CO3: Able to evaluate the various statistical techniques to solve statistical problems.

CO4: Able to compute the probability of real-world uncertain phenomena by identifying probability distribution that fits the phenomena.

CO5: Able to analyze statistical techniques in solving problems related to their field.

Course Content:

Module 1: Basic Probability

[5L]

Random Experiment, Outcome, Event, mutually exclusive events, Equality like and exhaustive, Classical definition of probability, conditional probability, and statistical independence. Sequential definition of probability. Baye's theorem and related problems.

Module 2: Random Variable and Distribution

[15L]

Discrete and continuous random variable, Probability density function and probability mass function for single variable only, Distribution function and its properties, Definitions of Expectation and Variance, properties and examples, Some important discrete distribution: Binomial and Poisson distribution and related problems. Some important continuous distribution: Normal and Uniform distributions and related problems.

Module 3: Basic Statistics

[14L]

Elements of Statistical methods. Primary data and secondary data. Population and sample. Sample survey. Chart and diagram. Frequency distribution. Measures of central tendency: Mean, Median, Mode, Measure of dispersion: Range, standard deviation, Measure of skewness and kurtosis, Correlation, regression lines and Curve fitting by the method of least squares: fitting of straight lines.

Module 4: Applied Statistics**[14L]**

Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM), Testing of hypothesis: large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations. Small samples Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.

Course Title	ENTREPRENEURSHIP DEVELOPMENT			
Category	ABILITY ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	None			

Learning objectives:

The students will be able to develop and can systematically apply an entrepreneurial way of thinking that will allow them to identify and create business opportunities that may be commercialized successfully.

Course outcome:

C01: Able to detect distinct entrepreneurial traits

C02: Able to understand the parameters to assess opportunities for new business ideas

C03: Able to design strategies for successful implementation of ideas

C04: Able to write a business plan

Course content:

Module 1: Introduction

[6L]

Meaning, Needs and Importance of Entrepreneurship, Promotion of entrepreneurship, Factors influencing entrepreneurship, Features of a successful Entrepreneurship.

Module 2: Establishing an Enterprise

[4L]

Forms of Business Organization, Project Identification, Selection of the product, Project formulation, Assessment of project feasibility.

Module 3: Financing the Enterprise

[6L]

Importance of finance / loans and repayments, Characteristics of Business finance, Fixed capital management: Sources of fixed capital, working capital its sources and how to move for loans, Inventory direct and indirect raw materials and its management.

Module 4: Marketing Management

[4L]

Meaning and Importance, Marketing-mix, product management – Product line, Product mix, stages of product like cycle, marketing Research and Importance of survey, Physical Distribution and Stock Management.

Module 5: Entrepreneurship and International Business

[4L]

Meaning of International business, Selection of a product, Selection of a market for international business, Export financing, Institutional support for exports.

Course Code				
Course Title	MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	Basic knowledge of microbiology			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Microbial Quality Control in Food and Pharmaceutical Industries

Course Outcome:

CO1: Learn basics of infection and the epidemiology of infectious diseases.

CO2: Understand the morphology, pathogenicity and laboratory diagnosis of gram positive and negative organisms.

CO3: Study the morphology, pathogenicity and laboratory diagnosis of acid-fast bacteria.

CO4: Acquire basic knowledge about the pathogenicity and laboratory diagnosis of fungal and protozoan pathogens.

Course Content:

Module 1: Microbiological Laboratory and Safe Practices

[8L]

Good manufacturing practices - Good laboratory practices, Good microbiological practices Biosafety cabinets – Working of biosafety cabinets, using protective clothing, specification for BSL- 1, BSL-2, BSL-3. Discarding biohazardous waste – Methodology of Disinfection, Autoclaving & Incineration

Module 2: Determining Microbes in Food / Pharmaceutical Samples

[10L]

Culture and microscopic methods - Standard plate count, most probable numbers, Direct microscopic counts, Biochemical and immunological methods: Limulus lysate test for endotoxin, gel diffusion, sterility testing for pharmaceutical products; Molecular methods - Nucleic acid probes, PCR based detection, biosensors.

Module 3: Pathogenic Microorganisms of Importance in Food & Water

[10L]

Enrichment culture technique, Detection of specific microorganisms - on XLD agar, Salmonella Shigella Agar, Manitol salt agar, EMB agar, McConkey Agar, Saboraud Agar;

Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centres (COB, 10 min Resazurin assay)

Module 4: HACCP for Food Safety and Microbial Standards [8L]

Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations
Microbial Standards for Different Foods and Water – BIS standards for common foods and drinking water

Course Title	MANAGEMENT OF HUMAN MICROBIAL DISEASES			
Category	SKILL ENHANCEMENT COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	3
Total Contact Hours	36			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Management of Human microbial diseases.

Course Outcome:

C01: learning role of different micro-organisms causing human diseases

C02: Understanding the molecular mechanisms involved in different microbial diseases.

C03: Learning about therapeutic strategies used to treat these diseases

Course Content:

Module 1: Human Diseases

[8L]

Infectious and non-infectious diseases, microbial and non-microbial diseases, Deficiency diseases, occupational diseases, Incubation period, mortality-morbidity rate, nosocomial infections

Module 2: Microbial diseases

[10L]

Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous system diseases, skin diseases, eye diseases, urinary tract diseases, sexually transmitted diseases: Types, route of infection, clinical systems and general prevention methods, study of recent outbreaks of human diseases (SARS/ Swine flu/Ebola) – causes, spread and control, Mosquito borne disease – Types and prevention.

Module 3: Therapeutics of Microbial diseases

[10L]

Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins), quinolones, polypeptides and aminoglycosides.

Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains.

Treatment using antiviral agents: Amantadine, Acyclovir, Azidothymidine. Concept of HAART.

Module 4: Prevention of Microbial Diseases

[8L]

General preventive measures, Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors. Vaccines: Importance, types, vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

	4	0	0	4
Total Contact Hours	48			
Pre-requisites	None			

Learning Objective:

The objective of this course is to demonstrate significant cell biological principles, quantitative and analytical approaches that enable the students to translate the theoretical foundation in cell biology to be translated into practical understanding.

Course outcome:

C01: Able to understand of the structure of cell and various cellular events and function of various subcellular organelles

C02: Able to describe cell theory and techniques for fractionation of sub-cellular organelles.

C03: Able to acquire various microscopic techniques to visualize subcellular organelles.

C04: Able to understand the composition of cytoskeleton and extracellular matrix.

C05: Able to acquire knowledge of cell cycle, cell division and cell death mechanisms.

Course Content:

Module 1:

[6L]

History of cell biology, cell as basic unit of life, cell theory, protoplasm theory and organismal theory, Broad classification of cell types, Bacteria, Archaea (prokaryotic) and eukaryotic cells and their similarities and dissimilarities.

Microscopy: Working principle, types and applications

Module 2:

[8L]

Structure and functions of cell wall: Comparative analysis of bacterial cell wall plant cell wall and fungal cell wall. Plasma membrane – Basic structure and functions - exocytosis, endocytosis, phagocytosis, vesicles and their importance in transport. Cell Membrane and Permeability- Chemical components of biological membranes, organization and Fluid Mosaic Model.

Cytoskeleton structure – microtubules, microfilaments, intermediate filament - Structure, function and comparative analysis.

Module 3:

[12L]

Structure and functions of cell organelles – endoplasmic reticulum (rough endoplasmic reticulum and smooth endoplasmic reticulum), golgi apparatus, Mitochondria –

Learning Objective:

The objective of this course is to demonstrate significant cell biological principles, quantitative and analytical approaches that enable the students to translate the theoretical foundation in cell biology to be translated into practical understanding.

Course outcome:

C01: Students will be able to differentiate the cells of various living organisms

C02: Awareness of physiological processes of cell e.g., cell divisions.

C03: Students will be able to observe and correctly identify different cell types, cellular structures

Suggestive List of Experiments:

1. Study of plasmolysis and de-plasmolysis. **[1 day]**
2. Demonstration of dialysis. **[2days]**
3. Mitosis and Meiosis study in eukaryotic cells. **[2 days]**
4. Cell Counting and viability study by hemocytometer. **[1 day]**
5. Blood Smear Preparation **[1 day]**
6. Mitochondria isolation **[1day]**

Pre-requisites	None			

Learning objectives:

This course provides insight on replication, transcription and translation process in prokaryotes and eukaryotes, various mutations and their repair mechanisms, regulation of gene expression and mechanism of gene transfer.

Course Outcome:

C01: Able to acquire in-depth knowledge on how cellular machinery works, especially the protein factors orchestrating the processes.

C02: Able to present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

C03: Able to understand and apply the principles and techniques of molecular biology which prepares students for further education, basic and applied research, and/or as health professionals.

Course Content:

Module 1: DNA Structure and Replication

[8L]

DNA as genetic material, Structure of DNA, Types of DNA, Replication of DNA in prokaryotes and eukaryotes: Semiconservative nature of DNA replication, Bi-directional replication, DNA polymerases, the replication complex: Pre-priming proteins, primosome, replisome, Rolling circle replication, Unique aspects of eukaryotic chromosome replication, Fidelity of replication.

Module 2: DNA Damage, Repair and Homologous Recombination

[10L]

DNA damage and repair: causes and types of DNA damage, mechanism of DNA repair: Photoreactivation, base excision repair, nucleotide excision repair, mismatch repair, translesion synthesis, recombinational repair, nonhomologous end joining. Homologous recombination: models and mechanism.

Module 3: Transcription and RNA Processing

[15L]

RNA structure and types of RNA, Transcription in prokaryotes: Prokaryotic RNA polymerase, role of sigma factor, promoter, Initiation, elongation and termination of RNA chains 51 Transcription in eukaryotes: Eukaryotic RNA polymerases, transcription factors, promoters, enhancers, mechanism of transcription initiation, promoter clearance and elongation RNA splicing and processing: processing of pre-mRNA: 5' cap formation, polyadenylation, splicing, rRNA and tRNA splicing.

Module 4: Regulation of Gene Expression and Translation

[15L]

Regulation of gene expression in prokaryotes: Operon concept (inducible and repressible system), Genetic code and its characteristics, Prokaryotic and eukaryotic translation: ribosome structure and assembly, Charging of tRNA, aminoacyl tRNA synthetases, Mechanism of initiation, elongation and termination of polypeptides, Fidelity of translation, Inhibitors of translation. Posttranslational modifications of proteins.

Learning objectives:

This course provides insight on replication, transcription and translation process in prokaryotes and eukaryotes, various mutations and their repair mechanisms, regulation of gene expression and mechanism of gene transfer.

Course Outcome:

CO1: Able to independently execute a laboratory experiment using the standard methods and techniques in molecular biology, with the appropriate analysis and interpretation of results obtained.

CO2: Able to equip with molecular tools to enable their laboratory skills and troubleshooting mechanisms to become a competent molecular biologist.

CO3: Able to correlate theoretical aspects of molecular phenomena to finding practical basis of life and its maintenance.

Suggestive List of Experiments:

1. Isolation of genomic and plasmid DNA from bacterial cells. **[1 day]**
2. Agarose gel electrophoresis of genomic and plasmid DNA **[1 day]**
3. Estimation of DNA sample purity **[1 day]**
4. Preparation of restriction enzyme digests of DNA samples **[2 days]**
5. Protein extraction and quantification **[2 days]**

Course Code	YMI4003			
Course Title	INORGANIC CHEMISTRY			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	10+2 chemistry knowledge			

Learning objective:

Students will be empowered with basic to advance knowledge of inorganic chemistry.

Course outcome:

Students will gain an understanding of:

CO1: the bonding fundamentals for both ionic and covalent compounds, including electronegativity, bond distances and bond energies using MO diagrams and thermodynamic data

CO2: predicting geometries of simple molecules

CO3: the bonding models, structures, reactivity, and applications of coordination complexes, boron hydrides, metal carbonyls, and organometallics

CO4: The fundamentals of acid/base equilibria, including pH calculations, buffer behavior, acid/base titrations.

Course content:

Module I: Atomic Structure and Chemical Periodicity (12L)

X-ray spectra and atomic number, Bohr's theory of hydrogen atom, Sommerfeld's extension of Bohr's theory, Wave mechanics: deBroglie equation, Heisenberg's Uncertainty principle and its significance, Schrödinger wave equation, quantum numbers and their significance, Normalized and orthogonal wave functions, spectrum of hydrogen atom, radial and angular wave functions, Quantum numbers and concept of orbitals, shapes of s, p, d, f- orbitals, Aufbau principle, Pauli's exclusion principle, Hund's rule, effective nuclear charge, Slater rule.

Periodic classification of elements, modern form of Periodic table, periodicity of properties: atomic radii, ionic radii, covalent radii, van der Waals radii, ionisation energy, electron affinity, electronegativity (Pauling, Mulliken-Jaffe, Allred and Rochow scales), ionic potential. Applications in predicting the chemical behaviour of different elements, and inert pair effect.

Module II: Chemical Bonding and Structure: (12L)

(a) Ionic Bonding: General characteristics of ionic compounds: ionization energy, electron affinity etc. Sizes of ions, radius ratio rule and its limitation. Lattice energy, Born-Haber cycle.

(b) Covalent Bonding: General characteristics of covalent compounds, valence bond approach, directional character of covalent bond, hybridization involving s-, p- and d-orbitals. Valence State Electron Pair Repulsion (VSEPR) concept, shapes of simple molecules and ions. Fajan's Rules. Hydrogen bonding and its effect of physical and

chemical properties. Others types of molecular interaction.

Module III: Coordination Chemistry (12L)

IUPAC Nomenclature, Werner's theory, isomerism, Chelate effect, polynuclear complexes, labile and inert complexes, stereochemistry of coordination compounds with coordination numbers 4, 5 and 6.

Sedgwick's EAN concept and Valence Bond theory (inner and outer orbital complexes), electroneutrality principle and back bonding, limitations of valence bond theory, crystal-field theory, measurement of $10 Dq$ (Δ_o), CFSE in weak and strong fields, pairing energies, factors affecting the magnitude of $10 Dq$ (Δ_o , Δ_t). Octahedral vs. tetrahedral coordination, tetragonal distortions from octahedral geometry Jahn-Teller theorem, square planar geometry. Term symbol, Laporte selection rules, charge transfer spectra, Orgel diagram, Tanabe-Sugano diagram, Nephelauxetic effect, Racah parameter, vibronic coupling, band broadening, spin-orbit coupling, spin-forbidden transition, intensity stealing, magnetic properties, anomalous and subnormal magnetic moments. Qualitative aspects of Ligand field and Molecular Orbital theory.

Module IV: Acid base and Non aqueous (12L)

Acid-base reactions, Arrhenius concept, theory of solvent system (in H_2O , NH_3 , SO_2 and HF), Bronsted-Lowry's concept, relative strength of acids, Pauling rules, amphotericism, Lux-Flood concept, Lewis concept, Superacids, HSAB principle, acid base equilibria in aqueous solution and pH Acid-base neutralisation curves, indicator, choice of indicators. Physical properties of a non-aqueous solvent for functioning as an effective reaction medium, types of solvents and their general characteristics, liquid NH_3 as a non-aqueous solvent.

Learning objective:

To analyze chemical composition of various salts, quantitative estimation of metal ions and anions, synthesis and structure analysis of inorganic complexes.

Course objective:

Students will gain an understanding of:

CO1: common laboratory techniques including pH measurement, acid/base titrations, UV/Visible spectroscopy in emission and absorption mode, calorimetry, and colorimetry.

CO2: the use of the techniques mentioned above to solve chemical problems.

CO3: how to carry out self-directed experiments

CO4: practical laboratory experiments

Suggestive list of experiments:

A. Titrimetric Analysis

(i) Calibration and use of apparatus

(ii) Preparation of solutions of different Molarity/Normality of titrants

B. Acid-Base Titrations

(i) Estimation of carbonate and hydroxide present together in mixture.

(ii) Estimation of carbonate and bicarbonate present together in a mixture.

(iii) Estimation of free alkali present in different soaps/detergents

C. Oxidation-Reduction Titrimetry

(i) Estimation of Fe(II) and oxalic acid using standardized KMnO₄ solution.

(ii) Estimation of oxalic acid and sodium oxalate in a given mixture.

(iii) Estimation of Fe(II) with K₂Cr₂O₇ using internal (diphenylamine, anthranilic acid) and external indicator.

Any other experiment carried out in the class.

Learning objective:

The objective of the course is to create an awareness on Ethics and Human Values. This course will instil Moral and Social Values and Loyalty and create awareness on assessment of safety and risk.

Course outcome:

C01: Able to identify and analyze an ethical issue in the subject matter under investigation or in a relevant field

C02: Able to identify the multiple ethical interests at stake in a real-world situation or practice

C03: Able to articulate what makes a particular course of action ethically defensible

C04: Able to assess their own ethical values and the social context of problems

C05: Able to identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects

C06: Able to demonstrate knowledge of ethical values in non-classroom activities, such as service, learning, internships, and field work

Course content:

Module 1:

[2L]

Ethics and Human Values – Definition – Good Behaviour, Conduct and Character; Importance, Respects for Elders, Use and Relevance in Present-day Society.

Module 2:

[4L]

Indian Constitution and Values – Fundamental Rights and Duties -Freedom, Equality, Fraternity, Justice; Directive Principles of State Policy; Our National Emblem.

Module 3:

[6L]

Individual and Society – Desirable Basic Human Characters - Honesty, Truthfulness, Respect, Punctuality, Responsibility, Courtesy, Discipline, Kindness, courage, Character, Forgiveness, Friendship, Compassion, Consideration, Contentedness, Simplicity, Empathy, Avoiding Greed; Family responsibilities; Duties as a Member of the Society;

Social Concerns – Evils of Dowry, Caste System, Racial Discrimination; Participation in NCC, NSS, Scouts & Guides, NGC.

Module 4:

[4L]

Life Skills – Goal-setting; Self-esteem and Self-Confidence; Problem Solving; Decision Making; Time Management; Stress Management; Positive Thinking; Assertiveness; Teamwork; Interpersonal Relationships; Coping with Life Stresses; Suicidal Tendencies; Peer Pressure; Substance Abuse and Addiction.

Module 5:

[4L]

Environmental Concerns – Respect for Natural Environment – Land, Trees, Air, Water, Animals; Unethical Practices – Depletion of Natural Resources (Soil Erosion, Pollution, Mining, Deforestation); Use of Plastics and Pesticides; EcoClubs.

Module 6:

[2L]

Professional Ethics–Need and Importance – Goals – Dignity of Labour – Ethical Values in Different Professions – Management, Business, Teaching, Civil Services, Politics, Medicine, Policing, Judiciary.

Module 7:

[2L]

Ethics, Values and Thinking–Right Thinking, Right Understanding, Reflective Thinking, Rational / Critical Thinking, Creative Thinking.

TOTAL				12	0	6	20	18

Course Code	YMI5001			
Course Title	MICROBIAL GENETICS			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	NONE			

Learning Objective:

In-depth understanding of the genetics of microorganisms, including bacteria, viruses, and fungi. The course explores the molecular mechanisms of genetic processes, regulation of gene expression, genetic variation, and the application of microbial genetics in biotechnology and medicine.

Course Outcome:

CO1: Understanding the basic principles and mechanisms of microbial genetics, analyzing and interpret genetic data specific to microorganisms.

CO2: Explaining the regulation of gene expression in microbial systems.

CO3: Applying genetic engineering techniques in microbial research and biotechnology.

CO4: Recognizing the role of microbial genetics in infectious diseases and antimicrobial resistance.

MODULE I

[10L]

Introduction to Microbial Genetics: Overview of microbial genetics and its significance; Characteristics and genetic organization of bacteria, viruses, and fungi; Overview of Replication, transcription, and translation in microorganisms; Mechanisms and significance of horizontal gene transfer in microbes

MODULE II

[12]

Gene Regulation in Microbes: Mechanisms of transcriptional regulation in bacteria; Control of gene expression through operons and regulatory proteins; Post-transcriptional and post-translational regulation; Contribution of Quorum sensing in cellular signalling for the expression of various physiological traits; Experimental techniques used to study gene regulation in microbes.

Genetics of bacteriophages: Structure and classification of bacteriophages, Lytic cycle-infection of host cells; formation of viral components; maturation and release of virus particles, Lysogeny- nature of lysogeny; λ -phage, integration of viral genome into host genome; lysogenic stage and prophage cycle; factors governing lysogeny, Transduction: generalized transduction, co-transduction and linkage; Mapping by co-transduction, Specialized transduction- formation of specialized transducing particle from a λ - lysogen, Specialized transduction from λ gal and λ bio.

MODULE III

[8L]

Genetic Variation and Mutation: Types of mutations in microorganisms and their effects on microbial phenotypes; DNA repair mechanisms in microorganisms; Mobile genetic elements: plasmids and their types (F plasmid, R Plasmids, colicinogenic

plasmids, Ti plasmids, linear plasmids, yeast- 2 μ plasmid), Plasmid replication and partitioning, Host range, plasmid incompatibility, plasmid amplification, Regulation of copy number, curing of plasmids; transposons, and integrons; Genetic variability and adaptation in microbial populations.

Bacterial genetic mapping: Conjugation, Hfr and interrupted mating type, Sexduction.

MODULE IV

[8L]

Genetic Engineering in Microbes: Tools and techniques in microbial genetic engineering, Recombinant DNA technology and cloning vectors, Gene knockout and gene expression systems in microbes, Applications of microbial genetic engineering in biotechnology and industrial processes

MODULE V

[10L]

Microbial Genetics in Disease and Drug Resistance: Microbial pathogenesis and virulence factors, Antibiotic resistance mechanisms in bacteria, Genetic basis of viral infections and antiviral resistance, Microbial genomics and its impact on infectious disease research

Applied Microbial Genetics: Genetic manipulation of microbial communities and its applications, Microbial bioremediation and environmental applications, Synthetic biology and bioengineering in microbes, Ethical considerations in microbial genetics research

Course Code	YMI5002			
Course Title	RECOMBINANT DNA TECHNOLOGY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of molecular biology			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of recombinant DNA technology and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of recombinant DNA technology.

Course Outcome:

CO1: Understand genomic organization of prokaryotes including bacterial chromosome, vectors including bacterial plasmids, yeast and phage-based vectors as well as enzymes which are indispensable in RDT

CO2: Understand foreign gene delivering systems in prokaryotes, eukaryotes and plants

CO3: Understand PCR, sequencing techniques and gDNA, cDNA library screening

CO4: Applications of recombinant DNA technology and the role of microbes in rDNA technology

Course Content:

Module 1: Molecular Cloning- Tools and Strategies [16L]

Cloning Tools; Restriction modification systems: Types I, II and III. Mode of action, nomenclature, applications of Type II restriction enzymes in genetic engineering; DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases; Cloning Vectors: Definition and Properties Plasmid vectors: pBR and pUC series Bacteriophage lambda and M13 based vectors Cosmids, BACs, YACs; Use of linkers and adaptors; Expression vectors: *E. coli* lac and T7 promoter-based vectors, yeast YIp, YEp and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors

Module 2: Methods in molecular cloning [14L]

Transformation of DNA: Chemical method, Electroporation, Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral-mediated delivery, *Agrobacterium* - mediated delivery; DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE and Western blotting.

Module 3: PCR, sequencing and construction genomic,cDNA libraries [12L]

PCR: Basics of PCR, RT-PCR, Real-Time PCR; Sanger's method of DNA Sequencing: traditional and automated sequencing Primer walking and shotgun sequencing,

Genomic and cDNA libraries: Preparation and uses, screening of libraries: Colony hybridization and colony PCR, Chromosome walking and chromosome jumping

Module 4: Applications of RDT

[6L]

Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH, antisense molecules. Bt transgenic - cotton, brinjal, Gene therapy, recombinant vaccines, protein engineering and site directed mutagenesis

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of recombinant DNA technology and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of recombinant DNA technology.

Course Outcome:

C01: Study about Recombinant DNA Technology and its role in industries.

C02: Impart knowledge about techniques in Recombinant DNA Technology.

C03: Learn about production of Recombinant products.

C04: Know about emerging techniques in Recombinant DNA Technology

Suggestive List of Experiments:

1. Preparation of competent cells for transformation and Demonstration of Bacterial Transformation and calculation of transformation efficiency. **[2 day]**
2. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis **[1 day]**
3. Ligation of DNA fragments **[2 days]**
4. Cloning of DNA insert and Blue white screening of recombinants. **[2 days]**
5. Designing of primers for DNA amplification **[1 day]**
6. Amplification of DNA by PCR **[1 day]**
7. Demonstration of Western Blotting **[2 days]**

Course Code	XBT5003			
Course Title	BIOPHYSICAL CHEMISTRY			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of organic, inorganic and physical chemistry			

Learning objectives:

The main objective of the course is to know the principles of physical and biophysical Chemistry. The objective is also to understand the basics of methods used in laboratory to describe bio macromolecules and their interactions in cells and on single-molecule level.

Course outcome:

C01: Will be able to know principles of biophysical chemistry and their application in thermodynamic characterization and analysis of macromolecules

C02: Will be able to determine and calculates association/dissociation constants and kinetic constants with the use of known physicochemical methods.

C03: Will be aware of biophysical methods to study the biomolecules in bulk and at single-molecule level

C04: Will be able to make the synthesis of information from various sources and is capable of correct conclusions based on them

Course content:

Module 1: Principles of physical chemistry (basic rules and constants).

Module 2: Thermodynamics (I-III thermodynamic laws, enthalpy, entropy, Gibbs energy) and its application in characterization of proteins by ITC and DSC calorimetries.

Module 3: Chemical equilibria with special attantion to acid-base equilibria of peptides and proteins and association/dissociation constant in biochemistry.

Module 4: Chemical kinetics with enzymology.

Module 5: Methods dedicated to study protein conformation – circular dichroism, cryoEM, NMR.

Module 6: Mass spectrometry - principles of operations and application in macromolecules analysis.

Module 7: Principles of electrochemistry and nanopore based measurements.

Module 8: Fluorimetry and its applications from cell imaging to single-molecule measurements.

Recommended Books:

- 1) Biophysical Chemistry, A. Cooper (RSC Publishing).
- 2) Biological thermodynamics, D.T. Haynie (Cambridge University Press).
- 3) Physical Chemistry, A.G. Whittaker, A.R. Mount, M.R. Heal (Physical Chemistry, A.G. Whittaker, A.R. Mount, M.R. Heal).
- 4) An Introduction to Single Molecule Biophysics Yuri L. Lyubchenko (CRC Press)

Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	0	0	3	2
Total Contact Hours	36			
Pre-requisites	Basic knowledge of organic, inorganic and physical chemistry			

Learning Objective:

To impart scientific approach and to familiarize with the experiments in chemistry relevant and to Provide the students with a solid foundation in Chemistry laboratory required to solve engineering problems and practical implementation of fundamental concepts

Course Outcomes:

CO1: Students will demonstrate a core knowledge base in the theory and practice of modern Biophysics

CO2: Students will function successfully in the laboratory and use safe laboratory practices.

C03: Students will critically evaluate data and design experiments to test hypotheses relevant to the practice of biophysics.

C04: Students will read and evaluate primary literature in the discipline.

Suggestive List of Experiment:

1. To familiarize in the use of pH meter and Colorimeter.
2. One-dimensional Ascending & Descending Paper chromatography of Amino acids & sugars
3. One-dimensional Ascending & Descending TLC of Amino acids & sugars
4. Fractionation of Sugars from fruit juice using TLC/HPTLC
5. Column Chromatography for Proteins, Pigments, amino acids.
6. To study the structure based visco-elastic properties of proteins, nucleic acids, sugars, lipids and enzyme using Ostwald's Viscometer.
7. Identification of simple organic compound by IR and NMR spectroscopy based on the provided spectra.

Course Code	YBT5004			
Course Title	Traditional Knowledge of Indian Foods (IKS)			
Category	MINOR COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	none			

Learning Objectives

To train the students on various aspect of traditional foods of India

Course Outcomes

CO1: relate the history and cultural aspect of Indian traditional food

CO2: identify the traditional food items from different regions of India

CO3: explain the food processing principles involved in the traditional Indian food preparation/processing

CO4: learn the traditional methods of preparation/processing of the Indian food items

Module 1 Historical and cultural perspectives 6H

Food as source of physical sustenance, food as religious and cultural symbols; Importance of food in understanding human culture - variability, diversity, from basic ingredients to food preparation; Impact of customs and traditions on food habits.

Module 1I Traditional methods of food processing 6H

Fermentation (kefir, yogurt, kimchi, and traditional dosa batter), Drying and dehydration: sun-drying, osmotic drying, brining, pickling and smoking. Salting and curing Traditional methods of milling grains – rice, wheat and corn; processes for edible oil extraction, paneer, butter and ghee manufacture; equipment's and processes as compared to modern methods.

Module 1II Traditional Food Patterns 6H

Regional Diets: Typical breakfast, meals, and snacks across different geographical regions of India. Global Influence: Traditional Indian foods and beverages that have achieved Pan-Indian or global popularity. Diversity of Items: Fermented foods, sweets, desserts, and street foods. Regulations: Intellectual Property Rights (IPR) issues surrounding traditional foods.

Module 1V Health & Nutritional Aspects 6H

Comparative Analysis: Traditional foods versus fast foods and junk foods (cost, safety, and nutrient composition). Nutritional Value: Energy/environmental costs and evaluation of bioactive components. Therapeutic Uses: Application of traditional foods for specific ailments and illnesses.

Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	None			

Learning objectives:

The course gives an overview of important virus families, their mode of infection to host, their replication strategies and mechanisms for development of viral infectious diseases. It also gives an inclusive idea about viral taxonomy, classification, replication strategies, pathogenicity and transmission of viruses and, additionally, diagnosis, prevention and treatment of viral diseases which includes antiviral immunity and viral evasion. The objective of this course is to help the student learn molecular virology and an overall idea of host viral interaction and pathogenesis.

Course outcome:

C01: Able to understand the various elements of the viral life cycle.

C02: Able to explain viral replication strategies; and compare and contrast replication mechanisms used by viruses relevant to public health.

C03: Able to understand the host antiviral immune mechanisms at a cellular and molecular level.

C04: Able to understand viral strategies to evade host immune and cellular factors relevant for human diseases.

C05: Able to discuss principles of virus pathogenesis, vaccination strategies and mechanisms of antiviral drugs.

Course Content:

Module 1:

[4L]

Classification and Morphology of Viruses: Cataloguing the virus through virus classification schemes of ICTV, Baltimore, Morphology, Host of infection, Viral structure. Morphology and ultra-structure of viruses. Virus related agents, viroids and prions.

Module 2:

[10L]

Transduction: Generalised and Specialised and its application.

Viral life cycle (lytic and lysogenic), growth and infection into the host of T4 and lambda phage. Survival of T4 inside host (5-HMC), Terminal Redundancy, Cyclic permutation in T4 genome. Headful packaging mechanism of viral genome.

Site specific Recombination technique of Lambda phage integration into host DNA, Genetic switch of Lambda phage (lytic and lysogenic life maintenance),

Module 3:

[12L]

Cultivation and assay of viruses: Cultivation of animal viruses using embryonated eggs, cell cultures (Cell-lines, cell strains and transgenic systems).

Cultivation of bacteriophage and Infectivity Assays using plaque assay, PFU, MOI counting.

Cultivation of plant viruses (TMV) by plant infection study.

Diagnostic tools for virus: Physical Methods-Light and Electron Microscopy.

Molecular techniques- Western Blotting, PCR, Microarray. Immuno-techniques: Hemagglutination, Neutralization, Complement fixation, ELISA

Module 4:

[8L]

Viral Multiplication: Mechanism of virus adsorption and entry into the host cell including genome replication and mRNA production by animal viruses, mechanism of RNA synthesis, mechanism of DNA synthesis, transcription mechanism and post transcriptional processing, translation of viral proteins, assembly, exit and maturation of progeny virions, multiplication of bacteriophages.

Module 5:

[14L]

Pathogenesis and Control of Viruses: Host and virus factors involved in pathogenesis, patterns of infection, pathogenesis of animal viruses: Herpes virus (HSV), Hepatitis virus (HBV, HCV), Cytomegalo virus (CMV), Poxvirus and Orthomyxovirus, pathogenesis of plant [TMV]. Structure, genomic organization, pathogenesis and control of HIV. Host cell transformation by viruses and oncogenesis of DNA and RNA viruses.

Control of viral infections through vaccines: Recombinant vector & protein vaccines, DNA vaccines, Interferons, Cytokines. Study of Viral Chemotherapeutic agents.

Course Code	YMI6001			
Course Title	IMMUNOLOGY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of molecular biology, cell biology, genetics			

Learning objectives:

To introduce the basic concepts of the immune system and its defence mechanisms. This will help to understand and rationalise concepts related to diseases. The course will help to understand vaccination, monoclonal and polyclonal antibodies production and their importance in therapeutics.

Course Outcome:

CO1: Able to conceptualize the basic mechanisms that regulate immune responses

CO2: Able to understand the molecular basis of complex, cellular processes involved in inflammation and immunity, in states of health and disease.

CO3: Able to translate understanding of basic mechanisms into identification of biological, clinical and therapeutic implications.

CO4: Able to design basic and state-of-the-art experimental methods in immunology.

Course Content:

Module 1: AN INTRODUCTION TO IMMUNOBIOLOGY [6L]

Primary and secondary lymphoid organs, their structure and function; Cells of immune system; hematopoiesis and differentiation; Structure and role of B and T lymphocytes, NK cells, macrophages, Dendritic cells, mast cells, eosinophils, basophils and neutrophils.

Module 2: IMMUNE RESPONSES [8L]

Innate and acquired immunity, Basics of humoral and cell mediated immune response; Lines of defence and various barriers; Clonal nature of immune response; Primary and secondary immune response; Inflammatory response; The Complement system.

Module 3: ANTIGEN AND ANTIBODY [14L]

Antigen and Immunogen, antigenicity vs immunogenicity, properties of antigens; Hapten and Adjuvants; Antibody molecule, types and structure; Antigenic determinant of antibody- isotype, allotype, idiotypic; Antibody function; monoclonal and polyclonal antibody; Hybridoma technology. B cell receptor, T cell receptor. Primary immunoglobulin gene rearrangement. Secondary diversification of the antibody

repertoire. Antigen antibody Interaction-Immunodiffusion, RIA & ELISA, Immuno-electrophoresis.

Module 4:

[14L]

ANTIGEN PROCESSING AND PRESENTATION: The major histocompatibility complex (MHC) and Cytokines-MHC molecule and its types, structure and their function, Cytokines and their role in immune response. Antigen processing by MHC-I and MHC-II. Antigen Presentation to T-Lymphocytes. Overview of hypersensitivity and autoimmunity.

THE ADAPTIVE IMMUNE RESPONSE- T Cell-Mediated Immunity, General properties of effector T cells and their cytokines, T cell-mediated cytotoxicity, Macrophage and B cell activation by T cells, TD and TI antigen.

Module 5: VACCINES & VACCINATION

[6L]

Active and Passive Immunization; Designing Vaccines for Active Immunization; Whole-Organism Vaccines; Purified Macromolecules as Vaccines; Recombinant-Vector Vaccines; DNA Vaccines; Multivalent Subunit Vaccines; mRNA Vaccines.

Course Title	IMMUNOLOGY LABORATORY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	0	0	3	2
Total Contact Hours	36			
Pre-requisites	Basic knowledge of molecular biology, cell biology, genetics			

Learning objectives:

To introduce hand on laboratory experience on basic immunological techniques.

Course Outcome:

C01: Capability to provide an overview of the interaction between the immune system and pathogens

C02: Sound hands on training for various immunological techniques.

C03: Demonstrate proper operation of the equipment and instruments used in this course.

C04: Enhanced Problem solving, creative thinking, and communication of immunological phenomenon at academia, industry and R&D settings.

Suggestive List of Experiments:

1. PBMC isolation from blood **[1 day]**
2. Haemagglutination assay **[1 day]**
3. Separation of serum and plasma from blood **[1day]**
4. Double immunodiffusion test using specific antibody and antigen. **[2 days]**
5. Radial immunodiffusion **[2days]**
6. Dot-ELISA. **[1day]**

Course Code	YMI6002			
Course Title	BIOINFORMATICS			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Knowledge of genetics, molecular biology			

Learning Objective:

The course introduces the fundamental principles and techniques of bioinformatics. It is also combines biology, computer science, and statistics to analyze and interpret biological data, various bioinformatics algorithms, databases, and tools used for sequence analysis, genome analysis, protein structure prediction, and functional annotation. Students will gain a solid foundation in theory, its application in biological research.

Course Outcome:

CO1: Understanding the principles and scope of bioinformatics.

CO2: Analyzing and interpreting biological sequences using bioinformatics tools and algorithms.

CO3: Performing genome analysis and comparative genomics; predicting protein structure and function using computational methods.

CO4: Applying statistical techniques in bioinformatics data analysis and critically evaluating bioinformatics resources and databases.

Course Content:

MODULE I: Introduction to bioinformatics [10L]

Concept of operating system, Programming languages used in bioinformatics, algorithm, Database management. Biological Databases: Overview, Applications, Prospects; Modes of database search, data storage (flat file, db-tables); Gene and protein sequence databases; GenBank, BLAST, EMBL, DDBJ, PDB etc.

MODULE II: Sequence alignment and sequence analysis [12L]

Concept of local and global sequence alignment, pairwise sequence alignment: Needleman-Wunsch and Smith-Waterman algorithms; Multiple sequence alignment: homology, analogy: ClustalW, MUSCLE, and MAFFT algorithms; T-Coffee, GeneDoc, Sequence motifs and pattern discovery; Hidden Markov Models (HMMs) in sequence analysis, scoring an alignment, substitutional matrices, Pattern recognition.

MODULE III: Genome Analysis [12L]

Genome annotation tools: GeneMark, AUGUSTUS, or Prokka; Comparative genomics analysis using software: OrthoMCL or VISTA; Identification of genomic variations and single nucleotide polymorphisms (SNPs); Visualization of genome features and comparative genomics data.

MODULE IV: Protein Structure Prediction and statistics [14L]

Protein structure databases and structure visualization tools; Protein structure prediction methods: homology modelling; Protein folding and energy minimization algorithms; Structural analysis and validation of predicted protein structures. Statistical concepts in bioinformatics: hypothesis testing, p-values, and multiple testing corrections; Statistical techniques for analyzing microarray and next-generation sequencing data, Evaluation and interpretation of bioinformatics results.

Course Code	YMI6102			
Course Title	BIOINFORMATICS LABORATORY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	0	0	3	2
Total Contact Hours	36			
Pre-requisites	Knowledge of genetics, molecular biology			

Learning Objective:

The course provides hands-on experience in applying bioinformatics techniques and tools to analyze biological data. Through practical exercises, data analysis, and scientific report writing, students will develop proficiency in bioinformatics methods, data manipulation, and data visualization.

Course Outcome:

CO1: Apply bioinformatics tools and software for sequence analysis, genome analysis, and protein structure prediction.

CO2: Manipulate and analyze biological data and scripting to interpret and visualize bioinformatics results effectively.

CO3: Design and execute bioinformatics workflows for specific research questions.

Suggestive List of Experiments:

1. Introduction to Bioinformatics Tools and Resources: Familiarization with bioinformatics software and databases; Retrieval and manipulation of biological data; Introduction to command-line tools and scripting for bioinformatics. **[2days]**

2. Sequence Analysis: Pairwise sequence alignment using tools like BLAST and ClustalW; Multiple sequence alignment using software such as MUSCLE or MAFFT; Identification and analysis of sequence motifs and patterns; Profile Hidden Markov Models (HMMs) for sequence analysis. **[2days]**

3. Genome Analysis: Genome annotation using tools like GeneMark, AUGUSTUS, or Prokka; Comparative genomics analysis using software such as OrthoMCL or VISTA; Identification of genomic variations and single nucleotide polymorphisms (SNPs); Visualization of genome features and comparative genomics data. **[2days]**

4. Protein Structure Prediction: Homology modeling of protein structures using software like MODELLER or SWISS-MODEL; Protein structure visualization and analysis using tools such as PyMOL or Chimera; Structure prediction validation and assessment of model quality; Protein-ligand docking studies and analysis of binding interactions.

[2days]

5. Transcriptomics and Gene Expression Analysis: Preprocessing and quality control of RNA-Seq data; Analysis of differential gene expression using tools like DESeq2 or edgeR; Gene ontology and pathway enrichment analysis; Visualization of gene expression data using heatmaps or volcano plots.

[2days]

6. Functional Analysis and Visualization: Functional annotation using databases such as Gene Ontology (GO) or KEGG; Network analysis and visualization using tools like Cytoscape or STRING; Integration of omics data and pathway analysis; Data visualization techniques for biological data interpretation.

[2days]

Course Code	YMI6003			
Course Title	MEDICAL MICROBIOLOGY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of Molecular biology, Genetics, RDT, Microbiology			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Medical Microbiology and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of Medical Microbiology.

Course outcome:

CO1: Learn basics of infection and the epidemiology of infectious diseases.

CO2: Understand the morphology, pathogenicity and laboratory diagnosis of gram positive and negative organisms.

CO3: Study the morphology, pathogenicity and laboratory diagnosis of acid-fast bacteria.

CO4: Acquire basic knowledge about the pathogenicity and laboratory diagnosis of fungal and protozoan pathogens.

Course Content:

Module 1: Normal microflora of the human body and host pathogen interaction [12Hrs]

Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract; Host pathogen interaction: Definitions - Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS

Module 2: Sample collection, transport and diagnosis [12 Hrs]

Collection, transport and culturing of clinical samples, principles of different diagnostic tests (ELISA, Immuno-fluorescence, Agglutination based tests, Complement fixation, PCR, DNA probes).

Module 3: Microbial diseases [12 Hrs]

List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control: Bacterial diseases [Respiratory Diseases: *Mycobacterium tuberculosis*; Gastrointestinal Diseases: *Vibrio cholerae*, others: *Clostridium tetani*]; viral diseases [Polio, HIV]; Protozoan diseases [Malaria, Kala-azar]; fungal diseases [Cutaneous mycoses: Tinea pedis (Athlete's foot) Systemic mycoses: Histoplasmosis Opportunistic mycoses: Candidiasis, Dermatomycosis]. Disease caused by prion-related particles: CJD, Kuru, BSE, CWD

Module 4: Antimicrobial agents and Immunological techniques [12 Hrs]

Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies - Animal models (Nude and SCID mice), SCID, DiGeorge syndrome, Chediak- Higashi syndrome, Leukocyte adhesion deficiency, CGD; Types of tumors, tumor Antigens, causes and therapy for cancers.

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Inhibitor of metabolism. Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine Antibiotic resistance, MDR, XDR, MRSA, NDM-1

Total Contact Hours	48			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of environmental microbiology and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of microbiology.

Course Outcome:

C01: Will understand the natural habitats of diverse microbial population and be familiar with microbial succession.

C02: Will understand how microbial interactions operate in ecosystem and their role in bio-geochemical cycling.

C03: Understanding the significance of waste management in society and essential factors to improve water potability.

C04: essential elements occurring within an ecosystem and its significance.

Course Content:

Module 1: Microorganisms and their Habitats [14L]

Structure and function of ecosystems, Terrestrial Environment: Soil profile and soil microflora; Aquatic Environment: Microflora of fresh water and marine habitats Atmosphere: Aeromicroflora and dispersal of microbes; Animal Environment: Microbes in/on human body (Microbiomics) & animal (ruminants) body. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels.; Microbial succession in decomposition of plant organic matter

Module 2: Microbial Interactions and Biogeochemical Cycling [16L]

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation; Microbe-Plant interaction: Symbiotic and non-symbiotic interaction; Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria. Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin; Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction Phosphorus cycle: Phosphate immobilization and solubilisation; Sulphur cycle: Microbes involved in sulphur cycle

Module 3: Waste Management and water potability [10L]

Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill); Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling

filter, activated sludge process and septic tank) and tertiary sewage treatment. Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test/MPN test, confirmed and completed tests for faecal coliforms (b) Membrane filter technique.

Module 4: Microbial Bioremediation [8L]

Concept of Bioremediation: *In situ, ex situ*, Principles and degradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (metals/ metalloids) matter. Biosurfactants in waste management, Hospital waste management, Tannery waste management, Agri waste management.

Course Code	YMI7002			
Course Title	FOOD AND DAIRY MICROBIOLOGY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of Food and Dairy Microbiology and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of microbiology.

Course Outcome:

C01: To understand the mechanisms of food spoilage and food processing.

C02: To provide in depth knowledge about food preservation techniques, food poisoning and fermentation product.

C03: To understand about the microbiology of Food borne diseases.

C04: To give concentrate knowledge on modern technology of microbial application and understand the basis of food safety regulations.

Course Content:

Module 1

Food as substrate and principal of microbial spoilage: Intrinsic and extrinsic factors that affect growth and survival of microbes in food, natural flora and source of contamination of foods in general; types of microorganisms in food (bacteria, mold and yeast); Bacterial and nonbacterial spoilage; spoilage of vegetables, fruits, meats, eggs, milk and butter, bread, canned foods. Contamination and spoilage: Cereals, sugar products, vegetables, fruits, meat and meat products, Fish and sea foods, spoilage of canned foods, Detection of spoilage and characterization.

Module 2

Principles, physical methods of Food Preservation and Fermented foods: Basic Principles Methods (canning, drying freezing, dehydration, irradiation; microwave processing, chemical preservatives); chemical methods of food preservation: salt, sugar, organic acids, SO₂, nitrite and nitrates, ethylene oxide, food additives, antibiotics and bacteriocins; Modern technologies in food preservation and aseptic Packaging. Fermented foods: Fermented dairy products (cheese, butter, yoghurt), Dosa, Kefir; Soya sauce, Saurkraut, Tempeh; Probiotics: health benefits, types of microorganisms used, probiotic foods available in market.

Module 3

Food-borne diseases: Food borne diseases (causative agents, foods involved, symptoms and preventive measures); Food intoxications: Staphylococcus aureus,

Clostridium botulinum and mycotoxins; Food infections: *Bacillus cereus*, *Vibrio parahaemolyticus*, *Escherichia coli*, *Salmonellosis*, Shigellosis, *Listeria monocytogenes* and *Campylobacter jejuni*; Food borne outbreaks- laboratory testing procedures.

Module 4

Milk as a substrate for microorganisms, Food sanitation and control: Physical and chemical properties of milk; Microbiological analysis of milk; Method of preservation of milk and milk products- pasteurization, sterilization and dehydration. Food sanitization and control HACCP, Indices of food sanitary quality and sanitisers; Cultural and rapid detection methods of food borne pathogens in foods (Biosensors and Immunoassays). Food control agencies and its regulations.

Course Title	BIOPROCESS TECHNOLOGY AND IKS			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of microbiology			

Learning objectives:

To familiarize students with technical and biological aspect of microbial utilisation for production of metabolites. To Explore IKS frameworks relevant to biological transformations.

Course outcome:

CO1: Able to understand the basic concept of fermentation and manipulations to enhance production of bioresource products.

CO2: Able to acquire knowledge of various types of substrates that can be utilized in the fermentation industry; type of fermentation that can be efficiently utilized for bioconversion of various low value substrates into value added products.

CO3: Able to implement the principles of fermentation technology for the production of numerous products of huge market value.

CO4: To compare indigenous fermentation practices with modern bioreactor design and implement circular economy with zero waste.

Course Content:

Module 1: Basics of bioprocess technology [12L]

Introduction to bioprocess technology and its chronological development. Basic principle components of fermentation technology. Types of microbial culture and its growth kinetics– Batch, Fedbatch and Continuous culture.

Module 2: Bioreactor Kinetics upstream processing [12L]

Design of bioprocess vessels- Significance of Impeller, Baffles, Sparger; Types of culture/production vessels- Airlift; Cyclone Column; Packed Tower and their application in production processes. Modern concept of biorefinery vs. traditional cascaded use. Principles of upstream processing – Media preparation, Inocula development and sterilization. Introduction to downstream processing, product recovery and purification.

Module 3: Traditional Separation Science and principles [12L]

Introduction to IKS principles; IKS as Solid-State Fermentation (SSF) Models: Multi-grain starter for rice beer, Alkaline-fermented soybean products – protease and ammonia

production kinetics, Lactic acid fermentation without added starter – competitive exclusion modeling. Microbial production of ethanol, amylase, lactic acid and Single Cell Proteins.

Module 4: Bioprocess Applications and IKS Circular Economy Theory [12L]

Modern bioprocess applications (anaerobic digestion, bioethanol), Map IKS practices to circular bioeconomy models (Gobar gas, vermicomposting), IKS as a closed-loop system: Inputs from local biomass, zero external energy, multi-product outputs. Effluent treatment.

Course Code	YMI8001			
Course Title	HOST PATHOGEN INTERACTION			
Category	Core course			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	None			

Learning Objective:

The course aims to provide an advanced understanding of the core principles and topics of host pathogen interaction, and to enable students to acquire a specialised knowledge and understanding of molecular mechanism of host pathogen interaction towards disease progression and treatment.

Course Outcome:

CO1: To understand various aspects of host-microbe interaction.

CO2: Learn basics of normal human flora and ecological succession of microbes.

CO3: To understand how microbes significantly contribute to the functioning of plant system.

CO4: To know microbial mechanisms of various infectious diseases.

Course content:

Module1:

[12L]

Host pathogen interaction: Definitions - Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial Infections, zoonotic transmission, vector-borne disease. Transmission of infection, Pathophysiologic effects of LPS. Virulence factors of pathogens: enzymes, toxins (host specific and non-specific) in disease development.

Module2:

[12L]

Disease management: Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract; colonization pattern and ecological succession; Defence mechanisms: First line, second and third line.

Module3:

[12L]

Genetics of Plant Diseases; Concept of resistance (R) gene and avirulence (avr) gene; types of plant resistance: true resistance- horizontal & vertical, apparent resistance. Defense Mechanisms in Plants Concepts of constitutive defence mechanisms in plants, inducible structural defences (histological- cork layer, abscission layer, tyloses, gums), inducible biochemical defences [hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis related (PR) proteins, plantibodies, phenolics, quinones, oxidative bursts].

Module4:**[12L]**

Mechanism of action of infectious diseases: Cholera, Diptheria, Tetanus; Viral interaction: Interferon production. Co-evolution of host pathogen leading to disease emergence.

Course Code	YMI8002			
Course Title	PROTEIN SEPARATION TECHNOLOGY			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	4	0	0	4
Total Contact Hours	48			
Pre-requisites	Basic knowledge of protein			

Learning Objective:

The course is aimed at learn different aspects of protein purification strategies.

Course Outcome:

CO 1: To gain hands on experience in gene cloning, *protein expression and purification*.

CO 2: To illustrate creative use of modern tools and techniques that engages in genetic engineering as well as in research laboratories conducting fundamental research

CO3: To expose students in application of recombinant DNA technology in biotechnological research using various protein expression techniques.

CO4: To train students in strategizing research methodologies employing genetic engineering techniques to begin a career in industry.

Course Content

Module 1: Protein structure visualization and analysis: [12L]

Protein structure databases; PDB file format; visualization and analysis of protein structure; protein structure prediction; visualization and analysis of protein – protein interface; determining the contribution of H bond, hydrophobic interaction, salt bridge in complex formation; homology modelling; threading and fold recognition; Ab initio structure prediction, structure validation tools.

Module 2: Structural and functional analysis of protein-ligand and protein-nucleic acid complex: [12L]

Introduction to protein – ligand complex; protein – nucleic acid complex; visualization and determination of protein – ligand interaction; determining the contribution of H bond and hydrophobic interaction in ligand binding; Visualization of DNA and RNA structure; different types of RNA structure; RNA structure prediction; visualization and

analysis of protein – nucleic interaction and determining the contribution of H bond and hydrophobic interaction; Basic introduction to molecular docking and docking tools.

Module 3: Applications of structural bioinformatics: [12L]

Protein engineering; Drug designing: structure guided drug designing, brute force screening, rational drug designing; Vaccine designing: epitope prediction and multi epitope vaccine construction; Molecular dynamics simulation: brief introduction, workflow, result analysis and visualization of a sample trajectory using standard viewing tool; Conformational dynamics and role in protein function; catalytic mechanism linked to conformational dynamics (example: spring loaded mechanism).

Course Code	YMI8004			
Course Title	IKS AND ETHNOMEDICINE			
Category	VALUE ADDED COURSE			
LTP & Credits	L	T	P	Credits
	2	0	0	2
Total Contact Hours	24			
Pre-requisites	None			

Learning objectives:

To gather knowledge about ethno medicinal properties of natural products and their uses in ancient time as well as in future.

Course outcome:

CO 1: Able to express the historical development of ethno medicinal values of natural products.

CO 2: Able to recognize and identify important plant species with ethno medicinal properties.

CO 3: Able to explain ethno botanically uses of plants. Detail their native habitats and cultivated lands.

Course content:

Module 1: [6L]

Introduction to IKS and Ethnomedicine – definition, history and its scope – Inter disciplinary approaches in ethnobotany – Collection of ethnic information.

Module 2: [6L]

Importance of medicinal plants – role in human health care – health and balanced diet (Role of proteins, carbohydrates, lipids and vitamins).

Module 3: [6L]

Tribal medicine – methods of disease diagnosis and treatment – Plants in folk religion – *Aegle marmelos*, *Ficus benghalensis*, *Curcuma domestica*, *Cyanodon dactylon* and *Sesamum indicum*.

Module 4: [6L]

Traditional knowledge and utility of some medicinal plants– *Solanum trilobatum*, *Cardiospermum halicacabum*, *Vitex negundo*, *Adathoda vasica*, *Azadirachta indica*, *Gloriosa superba*, *Eclipta alba*, *Aristolochia indica*, *Phyllanthus fraternus* and *Boerhaavia diffusa*. *Ocimum sanctum*, *Centella asiatica*, *Moringa*

Course Title	Protein Separation Technology Laboratory			
Category	MAJOR COURSE			
LTP & Credits	L	T	P	Credits
	3	0	0	2
Total Contact Hours	36			
Pre-requisites	None			

Learning Objectives:

Students will prepare crude protein extracts, perform ammonium sulfate precipitation, dialysis, and ultrafiltration; separate proteins by ion exchange, gel filtration, and affinity chromatography; analyze purity and molecular weight by SDS-PAGE; quantify protein concentration by Bradford and Lowry methods; and calculate yield and purification fold.

Course Outcomes

CO1: Prepare and clarify crude protein extracts from biological

sources **CO2:** Perform preliminary protein purification and

buffer exchange **CO3:** Separate proteins using liquid

chromatography techniques

CO4: Analyze purity, molecular weight, and quantity of purified proteins

Practical Syllabus

1. Preparation of buffers and chromatographic solutions.
2. Protein estimation using Bradford and Lowry assays.
3. Ammonium sulfate fractionation.
4. Dialysis and ultrafiltration.
5. Ion exchange chromatography.
6. Gel filtration chromatography.
7. SDS-PAGE and Native PAGE.
8. Enzyme purification and activity assay.
9. Construction of purification tables.

10. Interpretation of chromatographic and electrophoretic data.
